## LABOUR MARKET REPORT / RAPPORT SUR LE MARCHÉ DU TRAVAIL

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

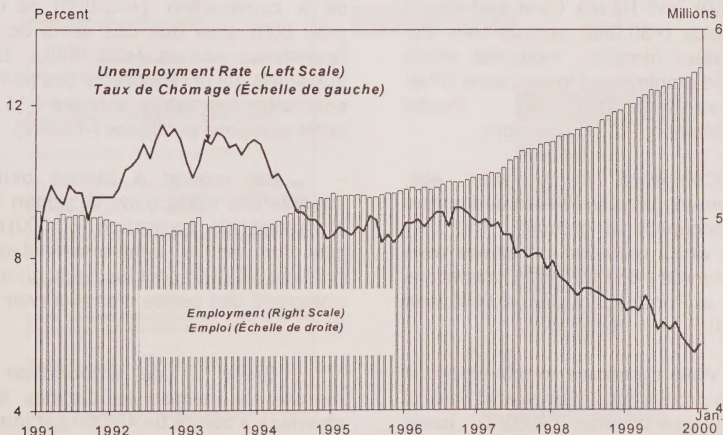

### JANUARY HIGHLIGHTS:

- In January 2000, the **seasonally-adjusted** employment in Ontario increased by 21,000 and the number of persons participating in the labour force went up by 30,000. As a result, the number of persons unemployed rose by 9,000.
- Ontario's **seasonally-adjusted** unemployment rate moved up slightly to 5.7 percent in January 2000 (see Chart 1).

### FAITS SAILLANTS EN JANVIER:

- En janvier 2000, le nombre d'emplois **désaisonnalisé** en Ontario a augmenté de 21 000, et le nombre de personnes faisant partie de la population active s'est élevé de 30 000. En conséquence, le nombre de sans-emploi s'est accru de 9 000.
- Le taux de chômage **désaisonnalisé** de l'Ontario a connu une légère hausse en passant à 5,7 % en janvier 2000 (voir le graphique 1).

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- On a year-over-year basis, the unadjusted monthly estimates show that employment in Ontario rose by 189,000 and labour force increased by 140,000 between January 1999 and January 2000.
- A comparison of employment changes across Canada shows that Ontario led the way in job growth followed by Quebec (+89,000), Alberta (+38,000) and British Columbia (+36,000). All other provinces recorded minor job growth over the last twelve months (see Chart 2).
- Underlying the 189,000 gain in jobs in Ontario, there was an increase of 225,000 full-time employment that was offset by a decline of 36,000 part-time jobs. The gain in full-time jobs was concentrated heavily among workers 45 years of age and older (+132,000).
- Across industry sectors, significant job increases were recorded in the Construction (+45,000); Manufacturing (+39,000) and Health Care and Social Assistance (+30,000) sectors over the past twelve months. Industries which recorded employment losses were Other Services (-15,000) and Public Administration (-10,000) sectors.
- Compared to a year ago, employment gains were recorded across most occupational groups. The only groups which recorded job losses were Management (-65,000) and Occupations unique to Primary Industry (-6,000) (see Chart 3).
- With significant improvement in Ontario's job market, the overall level of unemployment was 49,000 lower compared to January 1999 and the unemployment rate dropped by one full percentage point to 6 percent in January 2000.

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- Sur une base annuelle, les estimations mensuelles non désaisonnalisées montrent que le nombre total d'emplois en Ontario s'est élevé de 189 000 et que le nombre de personnes faisant partie de la population active a augmenté de 140 000 entre janvier 1999 et janvier 2000.
- Si l'on compare l'évolution de l'emploi dans tout le Canada, on observe que c'est l'Ontario qui a connu la croissance la plus marquée, suivie par le Québec (+89 000), l'Alberta (+38 000) et la Colombie-Britannique (+36 000). Toutes les autres provinces ont enregistré une faible croissance de l'emploi au cours des douze derniers mois (voir le graphique 2).
- L'augmentation du nombre d'emplois de 189 000 en Ontario a été sous-tendue par un accroissement du nombre de postes à plein temps de 225 000, qui a été contrebalancé par une baisse de 36 000 dans le nombre de poste à temps partiel. Cet accroissement du nombre de postes à temps plein a surtout touché les travailleurs âgés de 45 ans et plus (+132 000).
- Parmi les secteurs industriels, on a noté au cours des douze derniers mois une augmentation importante du nombre d'emplois dans le secteur de la construction (+45 000), de la fabrication (+39 000) ainsi que des soins de santé et de l'assistance sociale (+30 000). Les secteurs industriels qui ont enregistré des pertes d'emplois sont ceux des autres services (-15 000) et des administrations publiques (-10 000).
- Par rapport à l'année dernière, on a observé ces gains dans la plupart des groupes professionnels. La gestion (-65 000) et les métiers que l'on trouve uniquement dans l'industrie primaire (-6 000) sont les seuls groupes où l'on a enregistré des pertes d'emploi (voir le graphique 3).
- Grâce à une amélioration notable du marché de l'emploi en Ontario, le niveau de chômage a baissé de 49 000 par rapport à janvier 1999, et le taux de chômage est descendu de un point de pourcentage pour s'établir à 6 % en janvier 2000.

## LIST OF TABLES

1. Population, Labour Force, Participation Rate, Employment, Unemployment and Unemployment Rate: Ontario and Canada
2. Population, Participation Rate and Labour Force by Sex and Age: Ontario
3. Full-time and Part-time Employment by Sex and Age: Ontario
4. Unemployment and Unemployment Rate by Sex and Age: Ontario
5. Employment by Industry and Occupation: Ontario
6. Duration of Unemployment by Age Group: Ontario
7. Youth Unemployment and Duration of Unemployment by Age and School Attendance: Ontario
8. Labour Force, Unemployment and Unemployment Rate by Educational Attainment: Ontario
9. Labour Force, Employment, Unemployment and Unemployment Rate by Census Metropolitan Area (Three-Month Moving Average): Ontario
10. Labour Force, Employment, Unemployment and Unemployment Rate by Province

Source: Statistics Canada, The Labour Force, monthly.

Note: All estimates presented in the tables, unless otherwise specified, are actual estimates. They are not adjusted for seasonal variation. Totals may not add up because of rounding.

## LISTE DES TABLEAUX

1. Population, Population active, Taux d'activité, Emploi, Chômage et Taux de chômage: Ontario et Canada
2. Population, Taux d'activité et Population active selon le sexe et l'âge: Ontario
3. Emploi à plein temps et à temps partiel selon le sexe et l'âge: Ontario
4. Chômage et Taux de chômage selon le sexe et l'âge: Ontario
5. Emploi selon la Branche d'activité et la Profession: Ontario
6. Durée du chômage selon la Catégorie d'âge: Ontario
7. Chômage et durée du chômage chez les jeunes selon l'âge et Fréquentation scolaire: Ontario
8. Population active, Chômage et Taux de chômage par Niveau d'instruction: Ontario
9. Population active, Emploi, Chômage et Taux de chômage selon le recensement des Régions métropolitaines (Moyennes mobiles de trois mois): Ontario
10. Population active, Emploi, Chômage et Taux de chômage selon la Province

Source: Statistique Canada, La population active, mensuel.

Note: Toutes les estimations données dans ces tableaux, sauf indication contraire, sont des estimations réelles. Elles ne sont pas désaisonnalisées. Les totaux peuvent ne pas être exacts en raison de l'arrondissement.

## FEBRUARY HIGHLIGHTS:

- The seasonally-adjusted estimates for February 2000 show only slight changes in the number of persons in Ontario's labour force (+14,000) and in the level of employment (+9,000) (see Chart 1).

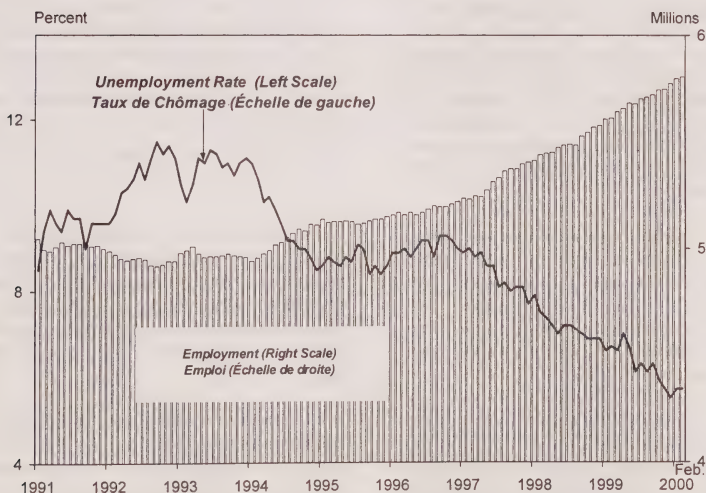

- Ontario's seasonally-adjusted unemployment rate remained unchanged at 5.7 percent.

## FAITS SAILLANTS EN FÉVRIER:

- Les estimations désaisonnalisées pour février 2000 ne révèlent que peu de changements dans le nombre de personnes faisant partie de la population active en Ontario (+14 000) et dans le niveau de l'emploi (+9 000) (voir le graphique 1).

- Le taux de chômage désaisonnalisé de l'Ontario s'est maintenu à 5,7 %.

**Chart 1. Employment and Unemployment Rates, Seasonally-Adjusted, Ontario**  
**Graphique 1. Taux d'emploi et de chômage désaisonnalisés de l'Ontario**

## **COMPARED TO A YEAR AGO: (Unadjusted Estimates)**

- A comparison of **unadjusted** monthly estimates between February 1999 and February 2000 shows an increase of 192,000 jobs in Ontario's economy. This growth in jobs accounted for almost half of all jobs gained at the national level.

- Major contributors to this growth in employment were the construction (+46,000); transportation and warehousing (+34,000); health care and social assistance (+33,000); and manufacturing (+31,000) industries. These increases were offset somewhat by job losses in the public administration (-15,000) and other services sectors (-11,000).

- On a year-over-year basis, employment growth was concentrated in full-time jobs (+203,000) while part-time employment declined by 11,000.

- Between February 1999 and February 2000, the overall unemployment level in Ontario went down by 50,000. There were declines in unemployment across all age groups. The unemployment level among workers 25-44 years of age decreased by 26,000. For young workers and the 45-and-over group, unemployment levels decreased by 16,000 and 8,000 respectively.

- Over the past year, unemployment rates declined across all age-gender groups. Female workers 15-24 years old recorded substantial decreases in unemployment rates – from 12.3 percent in February 1999 to 10.1 percent in February 2000 (see Chart 2).

- Average duration of unemployment moved down by 5.8 weeks to 18.1 weeks since last February. The most substantial decline occurred among older unemployed workers. For those 45 years of age and over, the average duration of unemployment declined by 14.1 weeks between February 1999 and February 2000 (see Chart 3).

## **PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)**

- Si l'on compare les estimations mensuelles **non désaisonnalisées** de février 1999 et celles de février 2000, on observe une augmentation de 192 000 emplois dans l'économie ontarienne. Ce chiffre représente près de la moitié de la croissance globale enregistrée au niveau national.

- Les secteurs qui ont contribué le plus à cette croissance de l'emploi sont ceux de la construction (+46 000), du transport et de l'entreposage (+34 000), des soins de santé et de l'assistance sociale (+33 000) et de la fabrication (+31 000). Ces augmentations ont été quelque peu contrebalancées par des pertes d'emplois dans les administrations publiques (-15 000) et dans d'autres secteurs de services (-11 000).

- Sur une base annuelle, la croissance de l'emploi a surtout touché les postes à plein temps (+203 000), alors que les postes à temps partiel ont baissé de 11 000.

- Entre février 1999 et février 2000, le taux de chômage global en Ontario a diminué de 50 000. Tous les groupes d'âge ont bénéficié de cette baisse du chômage. Chez les travailleurs âgés de 25 à 44 ans, le niveau de chômage s'est abaissé de 26 000. Chez les jeunes travailleurs et chez ceux âgés de 45 ans et plus, il a diminué respectivement de 16 000 et de 8 000.

- Au cours de l'année écoulée, les taux de chômage ont baissé parmi tous les groupes d'âge et de sexe. On a notamment enregistré des réductions importantes chez les femmes âgées de 15 à 24 ans pour lesquelles les taux de chômage sont passés de 12,3 % en février 1999 à 10,1 % en février 2000 (voir le graphique 2).

- Depuis février 1999, la durée moyenne du chômage s'est abaissée de 5,8 semaines pour atteindre 18,1 semaines. C'est chez les chômeurs plus âgés que l'on a observé la baisse la plus significative. Chez ceux âgés de 45 ans et plus, la durée moyenne du chômage a diminué de 14,1 semaines entre février 1999 et février 2000 (voir le graphique 3).

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## LABOUR MARKET REPORT / RAPPORT SUR LE MARCHÉ DU TRAVAIL

### MARCH HIGHLIGHTS:

- In March 2000, employment in Ontario on a **seasonally-adjusted** basis rose by 28,000. The number of people in the labour force went up by 22,000. Consequently, there was a decline in unemployment of 6,000 between February and March of 2000.

- Ontario's **seasonally-adjusted** unemployment rate edged down by 0.1 percentage point to 5.6 percent (see Chart 1).

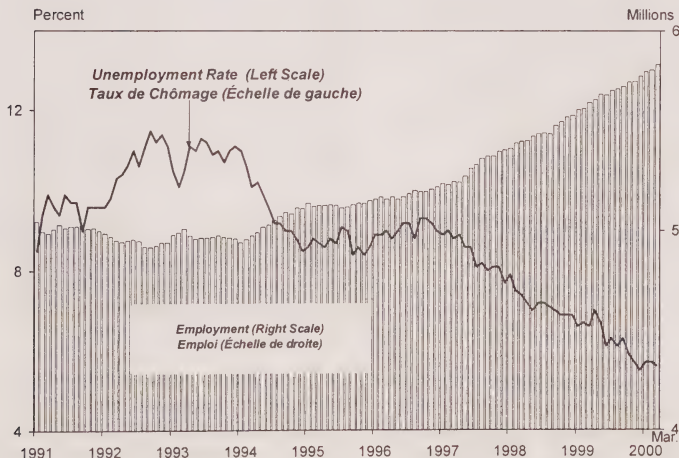

### FAITS SAILLANTS EN MARS:

- Le taux d'emploi **désaisonnalisé** pour mars 2000 a augmenté en Ontario de 28 000 personnes. Le nombre de personnes faisant partie de la population active dans la province a donc augmenté de 22 000, ce qui a entraîné une baisse du nombre de chômeurs de 6 000 personnes entre février et mars 2000.

- Le taux de chômage **désaisonnalisé** de l'Ontario a accusé un léger repli de 0,1 point de pourcentage pour se situer à 5,6 % (voir graphique 1).

Chart 1. Employment and Unemployment Rates, Seasonally-Adjusted, Ontario

Graphique 1. Taux d'emploi et de chômage désaisonnalisés de l'Ontario

**COMPARED TO A YEAR AGO:**  
**(Unadjusted Estimates)**

- On a year-over-year basis, the **unadjusted** estimates show that the number of persons in Ontario's labour force rose by 145,000 and the level of employment grew by an estimated 195,000 between March 1999 and March 2000.

- Underlying the overall rise in employment in Ontario, full-time jobs increased by 198,000 while part-time jobs declined by 3,000. The gain in full-time employment was shared by all age groups. Workers 45 years of age and older recorded the largest growth in full-time jobs of 97,000. In the part-time category, workers 25-44 years old recorded employment losses of 35,000 (see Chart 2).

- Across industries in Ontario, substantial gains in employment were recorded in the manufacturing (+52,000); construction (+49,000) and health care and social assistance (+36,000) sectors. These gains in employment, however, were offset partially by job losses in the other services (-19,000); public administration (-18,000) and primary (-11,000) industries (see Chart 3).

- On an **unadjusted** basis, the number of persons unemployed in Ontario fell by 50,000 and Ontario's unemployment rate declined by 1 percentage point to 6.1 percent in March 2000.

- Between March 1999 and March 2000, job growth occurred across all regions of the country with Ontario recording the highest employment increase of 195,000, followed by Quebec (+109,000), Alberta (+47,000) and British Columbia (+46,000).

**PAR RAPPORT À L'ANNÉE DERNIÈRE :**  
**(Estimations non désaisonnalisées)**

- Sur une base annuelle, les estimations **non désaisonnalisées** indiquent que le nombre de personnes dans la population active a augmenté de 145 000 et que le niveau de l'emploi a accusé une hausse d'environ 195 000 personnes entre le mois de mars 1999 et celui de mars 2000.

- Facteurs sous-jacents à la hausse globale de l'emploi en Ontario, le nombre d'emplois à plein temps a augmenté de 198 000 alors que le nombre d'emplois à temps partiel a diminué de 3 000. Tous les groupes d'âge ont bénéficié de la hausse du nombre d'emplois à plein temps. Le groupe des travailleurs âgés de 45 ans et plus a été caractérisé par la croissance la plus importante de l'emploi à temps plein (97 000). Quant à la catégorie des emplois à temps partiel, la catégorie des travailleurs âgés de 25 à 44 ans a enregistré une baisse de 35 000 emplois (voir graphique 2).

- Les secteurs industriels en Ontario qui ont le plus contribué à cette croissance de l'emploi sont ceux de la fabrication (+ 52 000), de la construction (+ 49 000) et des soins de santé et de l'assistance sociale (+36 000). Cependant, ces augmentations de l'emploi ont été quelque peu contrebalancées par des pertes d'emplois dans d'autres secteurs de services (-19 000), dans les administrations publiques (-18 000) et dans les industries primaires (-11 000) (voir graphique 3).

- Sur une base **non désaisonnalisée**, le nombre de personnes au chômage en Ontario a chuté de 50 000 et le taux de chômage de la province a accusé un repli de 1 point de pourcentage pour se situer à 6,1 % en mars 2000.

- Entre le mois de mars 1999 et celui de mars 2000, toutes les régions du pays ont été caractérisées par une croissance de l'emploi, l'Ontario se classant cependant en tête de file (+195 000), suivi du Québec (+109 000), de l'Alberta (+47 000) et de la Colombie-Britannique (+46 000).

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

Estimates by industry are based on North American Industry Classification System (NAICS).

Estimates by occupation are based on 1991 Standard Occupational Classification.

Les estimations par secteur industriel s'appuient sur le North American Industry Classification System (NAICS).

Les estimations par profession sont basées sur la Classification type des professions de 1991.

## LABOUR MARKET REPORT / RAPPORT SUR LE MARCHÉ DU TRAVAIL

### APRIL HIGHLIGHTS:

- In April 2000, minor changes were recorded in Ontario's labour market. On a **seasonally-adjusted** basis, employment increased by 2,000 and the number of unemployed declined by 8,000 between March and April of 2000.

- Ontario's **seasonally-adjusted** unemployment rate edged down by 0.1 percentage point to 5.5 percent (see Chart 1).

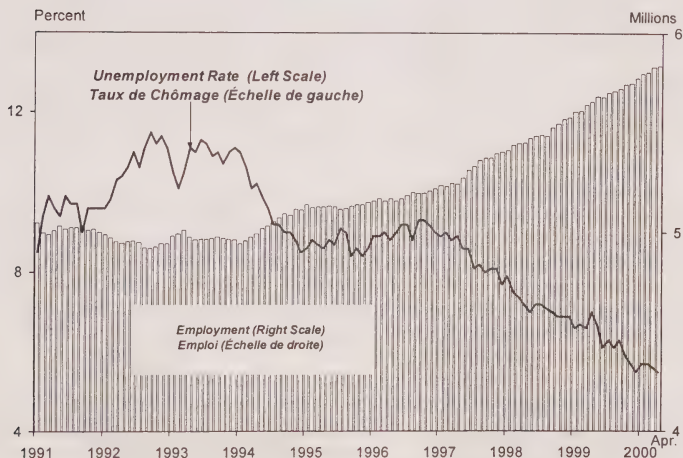

### FAITS SAILLANTS EN AVRIL:

- En avril 2000, le marché de l'emploi en Ontario a enregistré des changements mineurs. Sur une base **désaisonnalisée**, le nombre d'emplois a augmenté de 2 000, et le nombre de sans-emploi a diminué de 8 000 entre mars et avril 2000.

- Le taux de chômage **désaisonnalisé** de l'Ontario a baissé de 0,1 point de pourcentage pour s'établir à 5,5 % (voir le graphique 1).

Ontario

Graphique 1. Taux d'emploi et de chômage désaisonnalisés  
de l'Ontario

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- During the period April 1999 to April 2000, the **unadjusted** estimates show that the pace of job creation was greater than the growth in the labour force. Employment in Ontario rose by 176,000 while the number of persons in the labour force increased by 91,000.

- Over the past twelve months, full-time employment grew by 167,000 while part-time jobs increased by only 9,000.

- Employment gains in Ontario were concentrated in the manufacturing (+57,000); construction (+39,000) and health care and social assistance (+29,000) industries. On the other side of the scale, job losses were recorded in the other services (-21,000); primary and utilities (-20,000) and public administration (-4,000) sectors.

- With job growth being substantially greater than the increase in the number of persons in the labour force, there was a significant improvement in Ontario's labour market. The overall level of unemployment declined by 85,000 and the unemployment rate dropped by 1.5 percentage points to 5.7 percent in April 2000.

- Over the year, the incidence of unemployment decreased across all age groups. Young workers 15-24 years old experienced the largest decline in the incidence of unemployment. Their unemployment rate dropped by 4.2 percentage points to 11.8 percent this month (see Chart 2).

- In April 2000, unemployment rates among youths were higher for school leavers. The unemployment rates among 15-19 and 20-24 years old who were not in school full-time were 18.8 percent and 8.9 percent respectively (see Chart 3).

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- Au cours de la période allant d'avril 1999 à avril 2000, les estimations **non désaisonnalisées** révèlent que le rythme de la création d'emplois a été plus rapide que la croissance de la population active. En effet, le nombre d'emplois en Ontario a augmenté de 176 000 alors que le nombre de personnes faisant partie de la population active s'est élevé de 91 000.

- Au cours des douze derniers mois, le nombre d'emplois à plein temps a connu une hausse de 167 000 alors que le nombre d'emplois à temps partiel a seulement augmenté de 9 000.

- La croissance de l'emploi en Ontario a été particulièrement marquée dans le secteur de la fabrication (+57 000); de la construction (+39 000) et des soins de santé et de l'assistance sociale (+29 000). En revanche, on a noté des pertes d'emplois dans les autres services (-21 000); dans le secteur primaire et les services publics (-20 000) et dans les administrations publiques (-4 000).

- La croissance de l'emploi étant sensiblement plus importante que l'augmentation du nombre de personnes faisant partie de la population active, on a donc noté une amélioration significative du marché de l'emploi en Ontario. Le niveau global du chômage a baissé de 85 000, et le taux de chômage a diminué de 1,5 point de pourcentage pour s'établir à 5,7 % en avril 2000.

- Entre avril 1999 et avril 2000, l'incidence du chômage a diminué dans tous les groupes d'âge. Les jeunes travailleurs âgés de 15 à 24 ans ont connu la baisse la plus importante de l'incidence du chômage. Leur taux de chômage a chuté de 4,2 points de pourcentage pour s'établir à 11,8 % ce mois-ci (voir le graphique 2).

- En avril 2000, les taux de chômage chez les jeunes étaient plus élevés chez les sortants. Chez les jeunes âgés de 15 à 19 ans et de 20 à 24 ans qui n'étaient pas scolarisés à plein temps, les taux de chômage étaient respectivement de 18,8 % et de 8,9 % (voir le graphique 3).

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## MAY HIGHLIGHTS:

- In May 2000, the **seasonally-adjusted** estimates show moderate changes in Ontario's labour market. Both the number of persons employed and the number of persons participating in the labour force increased by 4,000 between April and May of 2000.

- Ontario's **seasonally-adjusted** unemployment rate remained unchanged at 5.5 percent in May 2000 (see Chart 1).

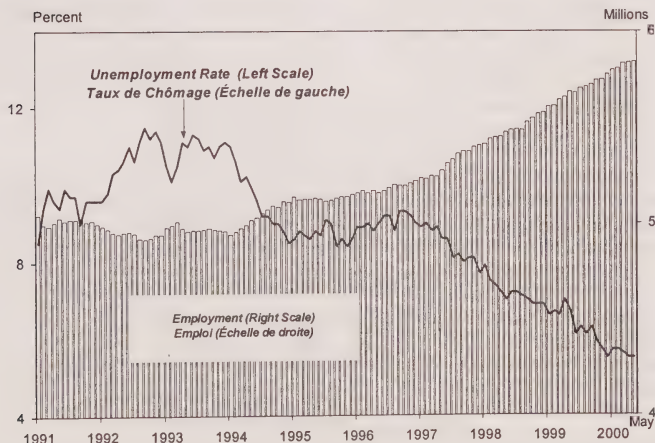

## FAITS SAILLANTS EN MAI:

- En mai 2000, les estimations **désaisonnalisées** révèlent des changements modérés sur le marché de l'emploi en Ontario. Le nombre de personnes ayant un emploi et le nombre de personnes faisant partie de la population active ont augmenté de 4 000 entre avril et mai 2000.

- Le taux de chômage **désaisonnalisé** de l'Ontario s'est maintenu à 5,5 % en mai 2000 (voir le graphique 1).

Chart 1. Employment and Unemployment Rates, Seasonally-Adjusted, Ontario

Graphique 1. Taux d'emploi et de chômage désaisonnalisés de l'Ontario

## **COMPARED TO A YEAR AGO: (Unadjusted Estimates)**

- On a year-over-year basis, the unadjusted estimates show that the number of persons in Ontario's labour force rose by 89,000 and the level of employment increased by 167,000 between May 1999 and May 2000.

- Underlying the overall gain in employment, there were substantial variations in job creation across industry sectors. Over the past twelve months, employment moved up in the manufacturing (+44,000) and health care and social assistance (+43,000) sectors. However, these gains were offset partially by job losses in the public administration (-19,000); other services (-15,000) and agriculture (-15,000) industries.

- Employment growth was most significant among workers 45 years of age and older (+90,000) while the 15-24 year old and 25-44 year old workers recorded employment gains of 23,000 and 53,000 respectively.

- On an unadjusted basis, the level of unemployment in Ontario declined by 78,000 and the unemployment rate moved down by 1.4 percentage points from 7.1 percent in May 1999 to 5.7 percent in May 2000.

- A comparison of employment changes between May 1999 and May 2000 across Census Metropolitan Areas of Ontario shows that job creation was most significant in Metropolitan Toronto (+84,000) followed by Ottawa-Hull (+23,000). Except for CMA Oshawa where employment declined by 3,000, all other Census Metropolitan Areas in Ontario recorded relatively small changes in job growth (see Chart 2).

- In May 2000, unemployment rate was highest in Census Metropolitan Area of Sudbury (7.9%). CMA Kitchener-Waterloo recorded the lowest unemployment rate of 4.9 percent as of May 2000 (see Chart 3).

## **PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)**

- Sur une base annuelle, les estimations non désaisonnalisées indiquent que le nombre de personnes faisant partie de la population active en Ontario s'est élevé de 89 000 et que le niveau de l'emploi a augmenté de 167 000 entre mai 1999 et mai 2000.

- À la base de l'augmentation générale du nombre d'emplois, on note des variations importantes dans la création d'emplois dans les différents secteurs industriels. Au cours des douze derniers mois, le nombre d'emplois s'est élevé dans les secteurs de la fabrication (+44 000) ainsi que des soins de santé et de l'assistance sociale (+43 000). Ces gains ont toutefois été contrebalancés par des pertes d'emplois dans les secteurs des administrations publiques (-19 000), des autres services (-15 000) et de l'agriculture (-15 000).

- La croissance de l'emploi a été particulièrement marquée chez les travailleurs âgés de 45 ans et plus (+90 000) alors que chez ceux âgés de 15 à 24 ans et de 25 à 44 ans, on a enregistré des hausses de 23 000 et de 53 000 respectivement.

- Sur une base non désaisonnalisée, le niveau du chômage en Ontario a baissé de 78 000, et le taux de chômage a diminué de 1,4 point de pourcentage, passant de 7,1 % en mai 1999 à 5,7 % en mai 2000.

- Si l'on compare l'évolution de l'emploi entre mai 1999 et mai 2000 dans les régions métropolitaines de recensement (RMR) de l'Ontario, on observe que c'est dans la communauté urbaine de Toronto que la création d'emplois a été la plus importante (+84 000), suivie par Ottawa-Hull (+23 000). À l'exception de la RMR d'Oshawa où le nombre d'emplois a baissé de 3 000, toutes les autres RMR de l'Ontario ont enregistré relativement peu de changements dans la croissance de l'emploi (voir le graphique 2).

- En mai 2000, c'est dans la RMR de Sudbury que le taux de chômage a été le plus élevé (7,9 %). En revanche, celle de Kitchener-Waterloo a enregistré le taux de chômage le plus bas, soit 4,9 %, en mai 2000 (voir le graphique 3).

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

### JUNE HIGHLIGHTS:

- On a seasonally-adjusted basis, there were minor changes in Ontario's labour market in June 2000. Total employment and the number of persons in the labour force grew by 8,000 and 4,000, respectively. These changes led to a decline of 4,000 in the number of persons unemployed between May and June of 2000.

- Ontario's seasonally-adjusted unemployment rate edged down to 5.4 percent in June 2000 (see Chart 1).

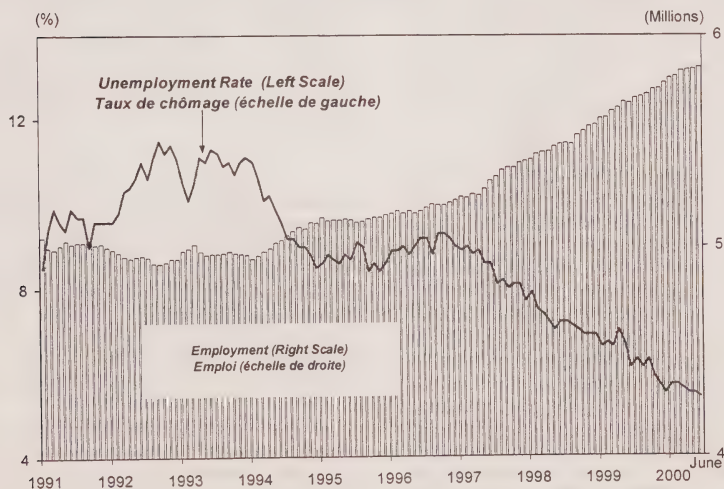

### FAITS SAILLANTS EN JUIN:

- En juin 2000, les estimations désaisonnalisées révèlent des changements mineurs sur le marché du travail en Ontario. L'emploi total et le nombre de personnes faisant partie de la population active ont augmenté respectivement de 8 000 et de 4 000. Ces changements ont entraîné une baisse de 4 000 chômeurs entre le mois de mai et de juin 2000.

- Le taux de chômage désaisonnalisé de l'Ontario a accusé un léger fléchissement pour se situer à 5,4 pour cent en juin 2000 (voir le graphique 1).

**Chart 1. Employment and Unemployment Rates, Seasonally-Adjusted, Ontario**

**Graphique 1. Taux d'emploi et de chômage désaisonnalisés de l'Ontario**

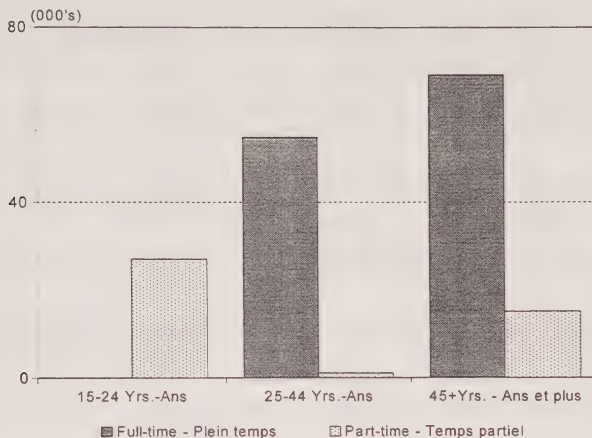

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- While changes were moderate on a month-to-month basis, a comparison of unadjusted estimates shows an increase of 166,000 jobs in Ontario's economy over the twelve month period June 1999 to June 2000.
- Underlying the overall rise in jobs in Ontario, full-time employment increased by 124,000 while part-time jobs went up by 43,000. The gain in full-time employment was concentrated among workers 25-44 years old and workers 45 years of age and older. For youths 15-24 years old in Ontario, job gains occurred in part-time employment (+27,000) only (see Chart 2).
- Across industries in Ontario, employment growth was most significant in the manufacturing (+45,000); information, culture and recreation (+31,000) sectors. However, these increases were offset somewhat by job losses in the public administration (-22,000) and primary (-22,000) industries.
- On an unadjusted basis, the number of persons in Ontario's labour force increased by 130,000. With job growth greater than labour force growth, the level of unemployment in Ontario declined by 36,000 and the unemployment rate moved down from 6 percent in June 1999 to 5.3 percent in June 2000.
- Compared to a year ago, female workers fared better than male workers. For males, between June 1999 and June 2000, labour force increased by 50,000, employment grew by 65,000 and unemployment decreased by 15,000. For females, the number in the labour force increased by 81,000, employment rose by 102,000 and unemployment dropped by 22,000 (see Chart 3).
- Ontario's gain of 166,000 jobs accounted for 46% of all job growth at the national level. Except for Newfoundland, all other provinces recorded employment increases over the last twelve months.

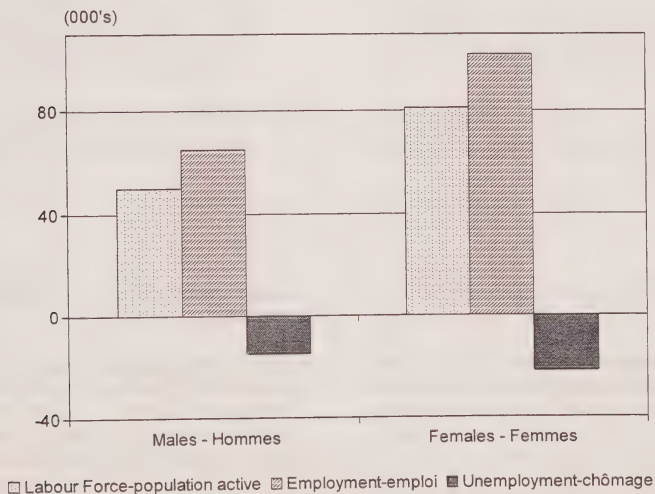

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- Bien que les changements d'un mois à l'autre aient été modérés, la comparaison des estimations non désaisonnalisées révèle une augmentation de 166 000 emplois au sein de l'économie ontarienne au cours de la période d'un an allant de juin 1999 à juin 2000.
- À l'origine de l'augmentation générale du nombre d'emplois, on note une augmentation du nombre d'emplois à plein temps de 124 000 et une hausse du nombre d'emplois à temps partiel de 43 000. La croissance des emplois à plein temps a été concentrée parmi les travailleurs âgés de 25 à 44 ans et parmi les travailleurs âgés d'au moins 45 ans. Quant aux jeunes âgés de 15 à 24 ans, la croissance de l'emploi a été concentrée dans le secteur de l'emploi à temps partiel dans la province (+27 000) (voir graphique 2).
- Au sein des secteurs de la province, la croissance de l'emploi a surtout été vigoureuse au sein du secteur de la fabrication (+45 000); et des secteurs de l'information, de la culture et des loisirs (+31 000). Cependant, ces progrès ont été contrebalancés par une érosion de l'emploi au sein du secteur de l'administration publique (-22 000) et de celui des industries primaires (-22 000).
- Sur une base non désaisonnalisée, le nombre de personnes au sein de la population active ontarienne a augmenté de 130 000. Comme la croissance de l'emploi dépasse celle de la population active, le nombre de chômeurs a diminué de 36 000 dans la province et le taux de chômage est passé de 6 pour cent en juin 1999 à 5,3 pour cent en juin 2000.
- Par rapport à l'année dernière, les travailleuses ont obtenu de meilleurs résultats que les travailleurs. Le nombre d'hommes au sein de la population active, entre le mois de juin 1999 et celui de juin 2000, a augmenté de 50 000, l'emploi a accusé une hausse de 65 000 et le nombre de chômeurs a diminué de 15 000. Quant aux femmes, leur nombre au sein de la population active a augmenté de 81 000, l'emploi a accusé une hausse de 102 000 et le nombre de chômeuses a diminué de 22 000 (voir graphique 3).
- Les gains de 166 000 emplois en Ontario ont représenté 46 % de toute la croissance de l'emploi au niveau national. À l'exception de Terre-Neuve, toutes les autres provinces ont enregistré une hausse de l'emploi au cours des douze derniers mois.

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## JULY HIGHLIGHTS:

- In July 2000 on a seasonally-adjusted basis, employment in Ontario increased by 29,000 and the number of persons participating in the labour force went up by 23,000. Consequently the level of unemployment fell by 7,000.
- Ontario's seasonally-adjusted unemployment rate continued to edge down – from 5.4 percent in June to 5.3 percent in July 2000 (see Chart 1).

## FAITS SAILLANTS EN JUILLET:

- En juillet 2000, sur une base désaisonnalisée, le nombre d'emplois en Ontario a augmenté de 29 000, et le nombre de personnes faisant partie de la population active s'est élevé de 23 000. En conséquence, le niveau du chômage a baissé de 7 000.
- Le taux de chômage désaisonnalisé de l'Ontario a continué à descendre, passant de 5,4 % en juin à 5,3 % en juillet 2000 (voir le graphique 1).

**Chart 1. Employment and Unemployment Rates, Seasonally-Adjusted, Ontario**  
**Graphique 1. Taux d'emploi et de chômage désaisonnalisés de l'Ontario**

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- During the period July 1999 to July 2000, the unadjusted estimates show that the number of persons in Ontario's labour force increased by 118,000 and the level of employment rose by 181,000.

- Underlying the total gains in employment, there was an increase of 149,000 in full-time jobs. Female workers accounted for 62% (+112,000) of the total job growth in Ontario.

- All industry sectors in Ontario recorded increases in employment except for the primary (-32,000); public administration (-14,000) and utilities industries (-8,000).

- On an unadjusted basis, the overall level of unemployment in Ontario was 63,000 lower compared to July 1999 and the unemployment rate moved down from 6.8 percent to 5.7 percent in July 2000.

- With respect to the incidence of unemployment by educational attainment, unemployment rate fell across all levels of education in Ontario (see Chart 2).

- Underlying the declines in unemployment rates by education level, there were considerable variations in labour force participation and employment. For workers with less than secondary school education and post-secondary certificate/diploma holders, there were declines in both in the number in the labour force and in employment. For high school graduates and university degree holders, increases in jobs outpaced labour force growth (see Chart 3).

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- Pour la période allant de juillet 1999 à juillet 2000, les estimations non désaisonnalisées révèlent que le nombre de personnes faisant partie de la population active en Ontario a augmenté de 118 000 et que le niveau de l'emploi s'est élevé de 181 000.

- À la base de tous les gains enregistrés dans le domaine de l'emploi, on a noté une hausse de 149 000 dans le nombre d'emplois à temps plein. Les travailleurs de sexe féminin représentaient 62 % (+112 000) de la croissance totale de l'emploi dans la province.

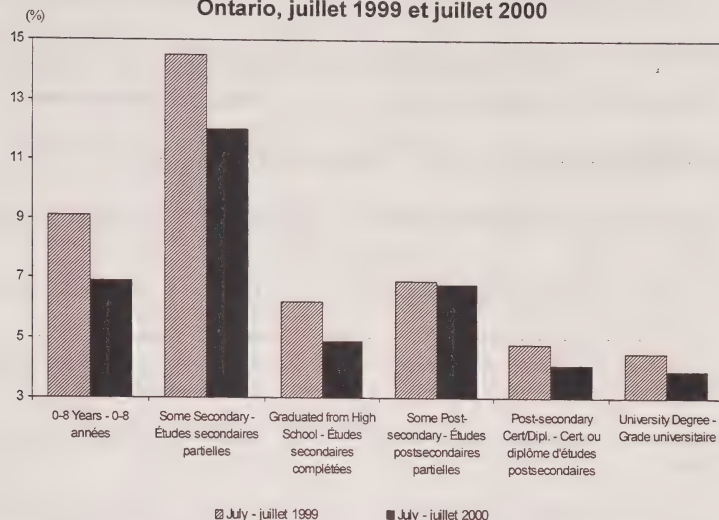

- Tous les secteurs industriels de l'Ontario ont enregistré des augmentations du nombre d'emplois à l'exception des industries primaires (-32 000); des administrations publiques (-14 000) et des services publics (-8 000).

- Sur une base non désaisonnalisée, le niveau global du chômage en Ontario a été inférieur de 63 000 par rapport à juillet 1999, et le taux de chômage est passé de 6,8 % à 5,7 % en juillet 2000.

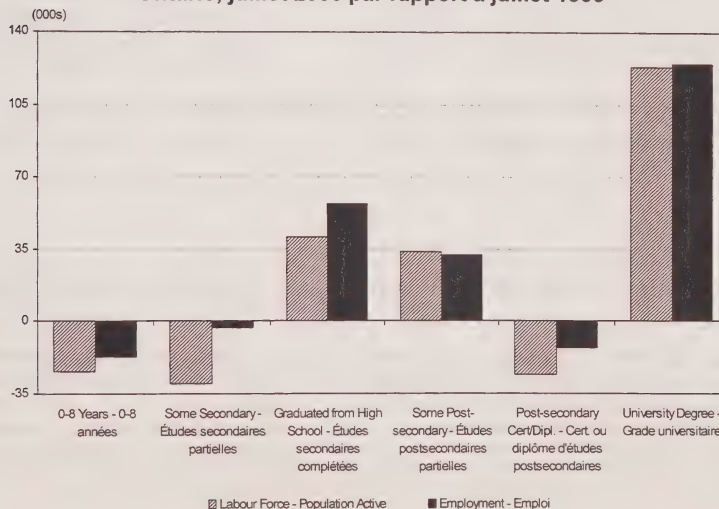

- En ce qui a trait à l'incidence du chômage en fonction du niveau d'instruction, le taux de chômage a chuté en Ontario quel que soit le niveau d'éducation (voir graphique 2).

- À la base des réductions observées dans les taux de chômage en fonction du niveau d'éducation, on a noté des variations considérables dans la participation à la vie active et dans l'emploi. Pour les travailleurs n'ayant pas terminé leurs études secondaires et pour les titulaires d'un diplôme ou d'un certificat d'études postsecondaires, le nombre de personnes faisant partie de la population active et le nombre d'emplois ont baissé. En revanche, pour les diplômés des écoles secondaires et les titulaires d'un diplôme universitaire, l'augmentation du nombre d'emplois a dépassé la croissance de la population active (voir graphique 3).

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

# Labour Market Report

## Rapport sur le marché du travail

August 2000 / Août 2000

## LABOUR MARKET REPORT / RAPPORT SUR LE MARCHÉ DU TRAVAIL

### AUGUST HIGHLIGHTS:

- In August 2000 on a **seasonally-adjusted** basis, the number of persons participating in Ontario's labour force went up by 53,000 and the number of persons employed increased by 5,000 only. These changes brought about an increase of 49,000 in the number of persons unemployed.

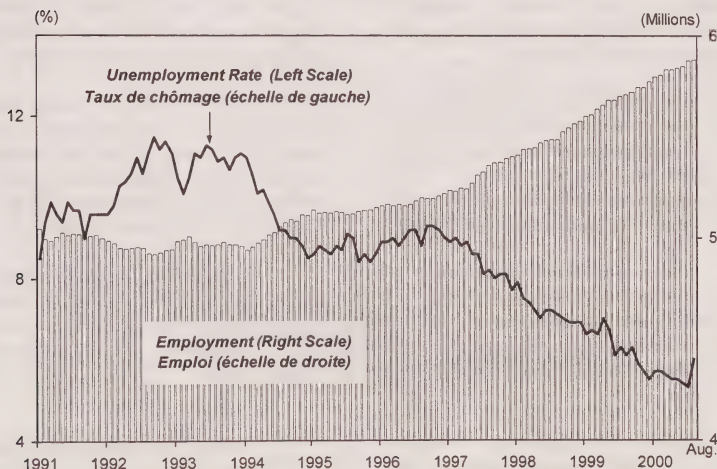

- Ontario's **seasonally-adjusted** unemployment rate moved up by 0.7 percentage points to 6 percent in August 2000 (see Chart 1).

### FAITS SAILLANTS EN AOÛT:

- En août 2000, sur une base **désaisonnalisée**, le nombre de personnes faisant partie de la population active en Ontario a augmenté de 53 000 alors que le nombre de personnes ayant un emploi s'est élevé de 5 000 seulement. Ces changements ont entraîné une hausse de 49 000 dans le nombre des sans-emploi.

- Le taux de chômage **désaisonnalisé** de l'Ontario a accusé une augmentation de 0,7 point de pourcentage pour s'établir à 6 % en août 2000 (voir le graphique 1).

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- A comparison of unadjusted estimates shows that employment in Ontario rose by 176,000 while the number of persons in the labour force increased by 192,000 between August 1999 and August 2000.

- Underlying the overall rise in employment, full-time jobs increased by 146,000 which accounted for 83 percent of the total job gains in Ontario. All age/gender groups recorded increases in full-time jobs. In the part-time category, although female workers 25-44 years old lost about 26,000 jobs, there was still an overall increase of 30,000 jobs over the last twelve months.

- Across industries in Ontario, the largest contributors to employment growth were information, culture and recreation (+47,000) and manufacturing (+43,000) sectors. Job losses were recorded in the primary industries (-26,000) and in finance, insurance and real estate (-9,000) sectors.

- With the changes of employment and labour force noted above, the overall level of unemployment was 16,000 lower compared to August 1999. The unadjusted unemployment rate remained unchanged at 6.2 percent in August 2000.

- The average duration of unemployment in Ontario decreased by 5.4 weeks over the past twelve months. Declines in the duration of unemployment were observed across all age groups (see Chart 2).

- Across Canada, job creation during the past twelve months was greatest in Ontario (+176,000) followed by Quebec (+95,000). Among the other provinces, changes in employment varied between August 1999 and August 2000 (see Chart 3).

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- En comparant les estimations non désaisonnalisées, on remarque que le nombre d'emplois en Ontario a augmenté de 176 000 tandis que le nombre de personnes faisant partie de la population active s'est élevé de 192 000 entre août 1999 et août 2000.

- À l'origine de l'augmentation générale du nombre d'emplois, on note une augmentation du nombre d'emplois à plein temps de 146 000 qui représente 83 % de la croissance totale observée en Ontario. On a constaté une hausse des emplois à plein temps parmi tous les groupes d'âge et de sexe. Dans la catégorie des emplois à temps partiel, si l'on a enregistré la perte de 26 000 emplois chez les femmes âgées de 25 à 44 ans, on a toutefois assisté à une augmentation générale du nombre d'emplois de 30 000 au cours des douze derniers mois.

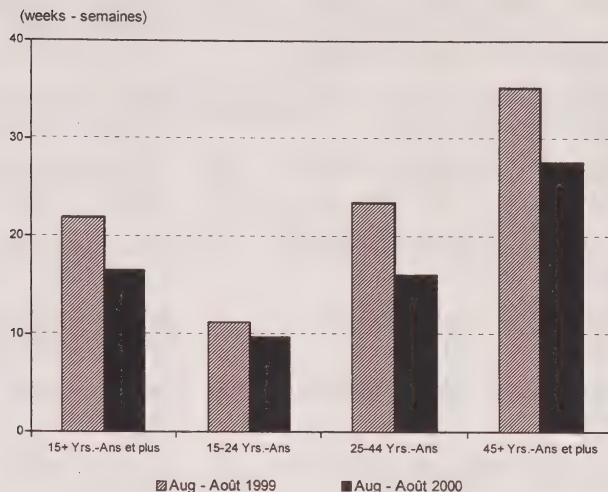

- Parmi les secteurs industriels en Ontario, ceux qui ont le plus contribué à la croissance de l'emploi sont ceux de l'industrie de l'information, de l'industrie culturelle et des loisirs (+47 000) et de la fabrication (+43 000). On a noté une érosion de l'emploi dans les industries primaires (-26 000) et dans les secteurs de la finance, des assurances et des services immobiliers (-9 000).

- Compte tenu de l'évolution du nombre d'emplois et de la population active expliquée ci-dessus, le niveau global du chômage a été plus bas de 16 000 qu'en août 1999. Le taux de chômage non désaisonnalisé est demeuré inchangé à 6,2 % en août 2000.

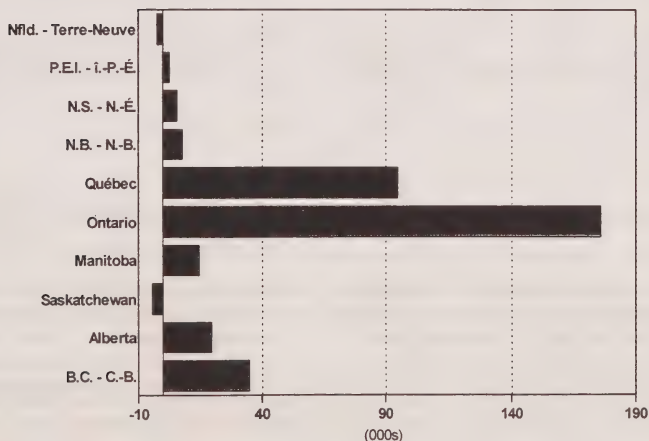

- La durée moyenne du chômage en Ontario a diminué de 5,4 semaines au cours des douze derniers mois. On a noté une baisse de la durée du chômage dans tous les groupes d'âge (voir le graphique 2).

- Au Canada, la création d'emplois au cours des douze derniers mois a surtout été marquée en Ontario (+176 000) et au Québec (+95 000). Dans les autres provinces, les changements survenus dans le nombre d'emplois ont varié entre août 1999 et août 2000 (voir graphique 3).

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## SEPTEMBER HIGHLIGHTS:

- In September 2000, Ontario's labour market continued to expand. On a **seasonally-adjusted** basis, employment rose by 18,000 and the number of persons in the labour force went up by 7,000. Consequently, there was a decline in unemployment of 11,000 between August and September of 2000.

- Ontario's **seasonally-adjusted** unemployment rate, after rising by 0.7 percentage points last month, dropped by 0.2 percentage points to 5.8 percent in September 2000 (see Chart 1).

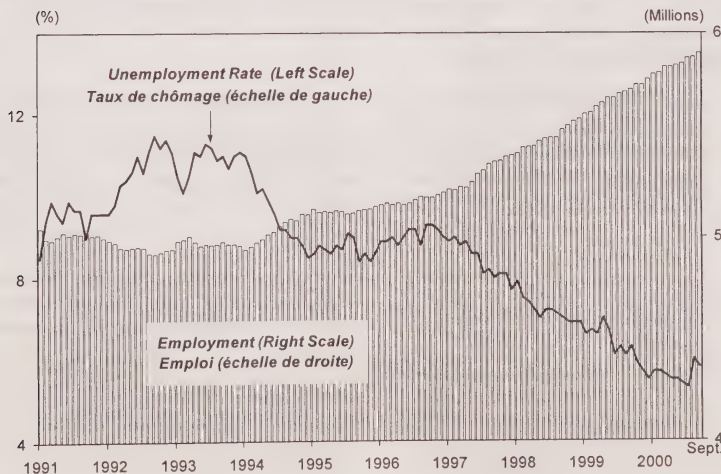

## FAITS SAILLANTS EN SEPTEMBRE:

- En septembre 2000, le marché du travail a continué à s'étendre dans la province. Sur une base **désaisonnalisée**, le nombre d'emplois a augmenté de 18 000, et le nombre de personnes faisant partie de la population active s'est élevé de 7 000. On a par conséquent observé une baisse de 11 000 dans le nombre des sans-emploi entre août et septembre 2000.

- Après avoir enregistré une hausse de 0,7 point de pourcentage le mois dernier, le taux de chômage **désaisonnalisé** de l'Ontario s'est abaissé de 0,2 point de pourcentage pour s'établir à 5,8 % en septembre 2000 (voir le graphique 1).

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- Over the past twelve months, changes in the unadjusted monthly estimates show that the number of persons in Ontario's labour force rose by 163,000 and total employment increased by 176,000. Between September 1999 and September 2000, there were significant increases in both full- and part-time jobs of 110,000 and 66,000 respectively.

- Among the sectors experiencing employment growth, Manufacturing and Information, Culture and Recreation sectors showed the largest gains – each up by 41,000. On the minus side, Agriculture and Educational Services recorded the largest declines in jobs of 25,000 and 8,000 respectively (see Chart 2).

- Compared to a year ago, employment gains were recorded across almost all occupational groups. Declines in employment were recorded in the Trades, Transport and Equipment Operators (-22,000) group; occupations unique to Primary industry (-12,000); and in Art, Culture, Recreation and Sport occupations (-5,000) (see Chart 3).

- During the period September 1999 to September 2000, Ontario's unadjusted level of unemployment declined by 13,000 and the unadjusted unemployment rate dropped by 0.4 percentage points to 5.4 percent.

- Young people in Ontario also benefited from the province's healthy labour market conditions. Between September 1999 and September 2000, employment for 15-24 years old grew by 47,000 and unemployment went down by 4,000. The youth unemployment rate dropped by almost one full percentage point to 11.6 percent in September 2000.

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- À la lumière des changements observés dans les estimations mensuelles non désaisonnalisées au cours des douze derniers mois, on constate que le nombre de personnes faisant partie de la population active en Ontario a augmenté de 163 000 et le nombre d'emplois, de 176 000. Par ailleurs, il est à noter que le nombre d'emplois à plein temps et le nombre d'emplois à temps partiel ont connu des hausses respectives de 110 000 et 66 000 entre septembre 1999 et septembre 2000.

- Parmi les secteurs qui ont connu une croissance de l'emploi, ceux de la fabrication ainsi que de l'information, de la culture et des loisirs ont enregistré les gains les plus importants, soit de 41 000 chacun. En revanche, c'est dans les secteurs de l'agriculture et des services d'enseignement que l'on constate les baisses les plus significatives dans le nombre d'emplois, à savoir de 25 000 et 8 000 respectivement (voir le graphique 2).

- Par rapport à il y a un an, on observe une croissance de l'emploi dans presque tous les groupes professionnels. On note toutefois des baisses dans le groupe des métiers, du transport et de la machinerie (-22 000); dans celui du secteur primaire (-12 000); et dans celui des arts, de la culture, des sports et des loisirs (-5 000) (voir le graphique 3).

- Au cours de la période allant de septembre 1999 à septembre 2000, le niveau non désaisonnalisé de l'emploi a baissé de 13 000, et le taux de chômage non désaisonnalisé a reculé de 0,4 point de pourcentage pour s'établir à 5,4 %.

- Les jeunes Ontariens et Ontariennes ont également bénéficié de la bonne santé du marché de l'emploi dans la province. Entre septembre 1999 et septembre 2000, le nombre d'emplois s'est élevé de 47 000 chez les jeunes âgés de 15 à 24 ans, et le niveau du chômage a chuté de 4 000. Le taux de chômage chez les jeunes a diminué de près de un point de pourcentage pour s'établir à 11,6 % en septembre 2000. (voir graphique 3).

Note: The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

Remarque: L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## LABOUR MARKET REPORT / RAPPORT SUR LE MARCHÉ DU TRAVAIL

### OCTOBER HIGHLIGHTS:

- In October 2000, Ontario's healthy labour market conditions encouraged more people to enter the labour force. On a seasonally-adjusted basis, the number of persons in the labour force went up by 33,000 while employment increased by 27,000. As a result, the number of unemployed increased by 6,000.

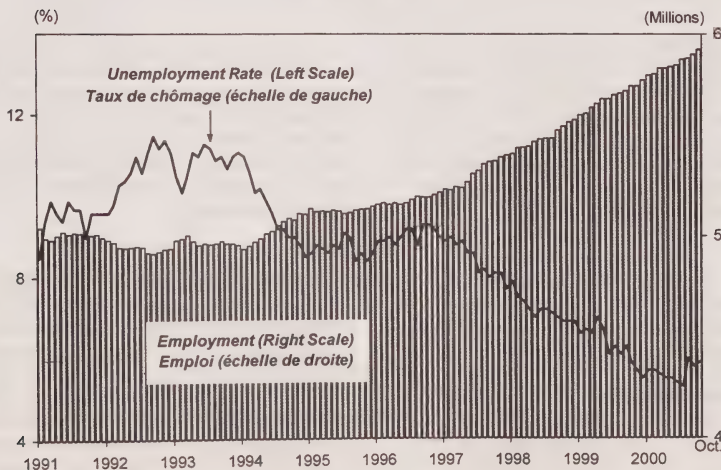

- Ontario's seasonally-adjusted unemployment rate edged up by 0.1 percentage point to 5.9 percent in October 2000 (see Chart 1).

### FAITS SAILLANTS EN OCTOBRE:

- En octobre 2000, les conditions favorables du marché du travail ontarien ont incité un plus grand nombre de personnes à entrer dans la population active. Sur une base désaisonnalisée, le nombre de personnes faisant partie de la population active a augmenté de 33 000 tandis que le nombre d'emplois s'est élevé de 27 000. En conséquence, le nombre de sans-emploi a connu une hausse de 6 000.

- Le taux de chômage désaisonnalisé de l'Ontario a légèrement augmenté, soit de 0,1 point de pourcentage, pour s'établir à 5,9 % en octobre 2000 (voir le graphique 1).

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- On a year-over-year basis, the **unadjusted** estimates show that employment in Ontario rose by 182,000 and labour force increased by 197,000 between October 1999 and October 2000.

- Across industries, Manufacturing sector continued to lead employment growth (+58,000) followed by Management, Administrative and Other Support Services (+41,000) and Professional, Scientific and Technical Services (+38,000) sectors. Industries which recorded major job losses were Primary (-26,000); Accommodation and Food Services (-19,000); Educational (-17,000) and Public Administration (-10,000) sectors.

- During the period October 1999 to October 2000, Ontario's **unadjusted** level of unemployment increased by 14,000 and the unemployment rate edged up by 0.1 percentage points to 5.4 percent.

- While the unemployment rate edged up over the past year, the overall duration of unemployment declined by 3.4 weeks. Between October 1999 and October 2000, the average duration of unemployment declined across every age group. The most substantial decline occurred among prime-age workers (-6.8 weeks) (see Chart 2).

- The average duration of unemployment for youth who were not attending school full-time also declined. For teenagers who were not full-time students in October 2000, the average duration of unemployment was 10.2 weeks compared to 10.8 weeks last October. For those 20-24 years old not attending school full-time, the average duration of unemployment went down from 16 weeks to 10.3 weeks. (see Chart 3 and Table 7).

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- Sur une base annuelle, les estimations **non désaisonnalisées** révèlent que le nombre d'emplois en Ontario a augmenté de 182 000 et le nombre de personnes faisant partie de la population active, de 197 000, entre octobre 1999 et octobre 2000.

- Parmi les branches d'activité, c'est le secteur de la fabrication qui continue à être le moteur de la croissance de l'emploi (+58 000), suivi par celui de la gestion d'entreprises, des services administratifs et autres (+41 000) et par celui des services professionnels, scientifiques et techniques (+38 000). Les branches d'activité qui ont enregistré les pertes d'emplois les plus importantes sont les industries primaires (-26 000); le secteur de l'hébergement et des services de restauration (-19 000); celui des services d'enseignement (-17 000) et celui des administrations publiques (-10 000).

- Pendant la période allant d'octobre 1999 à octobre 2000, le niveau de chômage **non désaisonnalisé** de l'Ontario a augmenté de 14 000 et le taux de chômage s'est élevé de 0,1 point de pourcentage pour s'établir à 5,4 %.

- Bien que le taux de chômage ait légèrement augmenté entre octobre 1999 et octobre 2000, la durée générale du chômage a baissé de 3,4 semaines. Pendant cette période, la durée moyenne du chômage a diminué parmi tous les groupes d'âge. C'est toutefois chez les travailleurs dans la force de l'âge que l'on a noté la baisse la plus significative (-6,8 semaines) (voir le graphique 2).

- La durée moyenne du chômage chez les jeunes ne fréquentant pas une école à plein temps a également chuté. Chez les adolescents qui n'étaient pas des élèves à plein temps en octobre 2000, la durée moyenne du chômage est de 10,2 semaines par rapport à 10,8 semaines en octobre 1999. Chez ceux âgés de 20 à 24 ans ne fréquentant pas une école à plein temps, la durée moyenne du chômage est passée de 16 semaines à 10,3 semaines (voir le graphique 3 et le tableau 7).

Note: The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

Remarque: L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## NOVEMBER HIGHLIGHTS:

- On a **seasonally-adjusted** basis, Ontario's employment continued to grow in November 2000. However, the job growth of 35,000 was accompanied by a larger rise of 44,000 in the number of persons in the labour force. This pushed the number of unemployed up by 9,000 in the province.
- Ontario's **seasonally-adjusted** unemployment rate edged up by 0.1 percentage point to 6 percent in November 2000 (see Chart 1).

## FAITS SAILLANTS EN NOVEMBRE:

- En novembre, l'emploi **désaisonnalisé** a continué d'augmenter en Ontario. Cependant, la croissance de l'emploi, soit 35 000 emplois, s'est accompagnée d'une augmentation plus notable du nombre de personnes au sein de la population active, soit 44 000 personnes. Le nombre de chômeurs a donc accusé une hausse de 9 000 personnes dans la province.
- Le taux de chômage **désaisonnalisé** a connu une hausse de 0,1 pour cent pour se situer à 6 pour cent en novembre 2000 (voir le graphique 1).

**Chart 1. Employment and Unemployment Rates, Seasonally-Adjusted, Ontario**  
**Graphique 1. Taux d'emploi et de chômage désaisonnalisés de l'Ontario**

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- Over the past twelve months, employment on an unadjusted basis rose by 355,000 for Canada as a whole and 219,000 of these jobs were created in Ontario. Significant job growth were also found in the provinces of British Columbia (+46,000), Alberta (+43,000) and Quebec (+26,000). Among all other provinces, minor changes in employment were recorded (see Chart 2).

- Across industries, sectors which created most jobs were Manufacturing (+67,000); Information, Culture and Recreation (+45,000) and Trade (+37,000). Industries which recorded major job losses were Accommodation and Food Services (-20,000); Agriculture (-16,000); Educational (-12,000) and Public Administration (-12,000) sectors.

- During the period November 1999 to November 2000, Ontario's healthy economy also attracted more people to enter the labour force (+250,000). As the growth in labour force outpaced job creation, Ontario's unadjusted level of unemployment increased by 30,000 and the unemployment rate edged up by 0.3 percentage points to 5.4 percent.

- A comparison of employment changes between November 1999 and November 2000 across Census Metropolitan Areas of Ontario shows that job creation was most significant in Metropolitan Toronto (+126,000) followed by Hamilton (+24,000). Except for CMA London where employment declined marginally, all other Census Metropolitan Areas in Ontario recorded employment gains (see Chart 3).

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- Au cours des douze derniers mois. Le taux d'emploi non désaisonnalisé a augmenté de 355 000 emplois au Canada; 219 000 de ces emplois ont été créés en Ontario. On a également assisté à une croissance vigoureuse de l'emploi en Colombie-Britannique (+46 000), en Alberta (+43 000) et au Québec (+26 000). Parmi les autres provinces, on n'a assisté qu'à des changements mineurs (voir le graphique 2).

- Au sein des industries, voici les secteurs qui ont été caractérisés par la croissance la plus dynamique : fabrication (+67 000); information, culture et loisirs (+45 000) et commerce (+37 000). Voici ceux qui ont été caractérisés par des pertes d'emplois massives : hôtellerie et restauration (-20 000); agriculture (-16 000); éducation (-12 000) et administration publique (-12 000).

- Durant la période allant de novembre 1999 à novembre 2000, le dynamisme de l'économie ontarienne a poussé un plus grand nombre de personnes à s'intégrer au marché du travail (+250 000). Comme la croissance de la population active a dépassé celle de la création d'emplois, le niveau de chômage non désaisonnalisé a augmenté de 30 000 personnes et le taux de chômage a accusé une hausse de 0,3 pour cent pour se situer à 5,4 pour cent.

- Une comparaison des variations de l'emploi entre le mois de novembre 1999 et celui de novembre 2000 au sein de toutes les régions métropolitaines de recensement a révélé que la création d'emplois avait surtout été vigoureuse dans la Communauté urbaine de Toronto (+126 000), suivie de Hamilton (+24 000). À l'exception de la RMR de London, où l'emploi a légèrement fléchi, toutes les autres régions métropolitaines de recensement de l'Ontario ont connu une hausse de l'emploi (voir le graphique 3).

## LIST OF TABLES

1. Population, Labour Force, Participation Rate, Employment, Unemployment and Unemployment Rate: Ontario and Canada
2. Population, Participation Rate and Labour Force by Sex and Age: Ontario
3. Full-time and Part-time Employment by Sex and Age: Ontario
4. Unemployment and Unemployment Rate by Sex and Age: Ontario
5. Employment by Industry and Occupation: Ontario
6. Duration of Unemployment by Age Group: Ontario
7. Youth Unemployment and Duration of Unemployment by Age and School Attendance: Ontario
8. Labour Force, Unemployment and Unemployment Rate by Educational Attainment: Ontario
9. Labour Force, Employment, Unemployment and Unemployment Rate by Census Metropolitan Area (Three-Month Moving Average): Ontario
10. Labour Force, Employment, Unemployment and Unemployment Rate by Province

Source: Statistics Canada, The Labour Force, monthly.

Note: All estimates presented in the tables, unless otherwise specified, are actual estimates. They are not adjusted for seasonal variation. Totals may not add up because of rounding.

## LISTE DES TABLEAUX

1. Population, Population active, Taux d'activité, Emploi, Chômage et Taux de chômage: Ontario et Canada
2. Population, Taux d'activité et Population active selon le sexe et l'âge: Ontario
3. Emploi à plein temps et à temps partiel selon le sexe et l'âge: Ontario
4. Chômage et Taux de chômage selon le sexe et l'âge: Ontario
5. Emploi selon la Branche d'activité et la Profession: Ontario
6. Durée du chômage selon la Catégorie d'âge: Ontario
7. Chômage et durée du chômage chez les jeunes selon l'âge et Fréquentation scolaire: Ontario
8. Population active, Chômage et Taux de chômage par Niveau d'instruction: Ontario
9. Population active, Emploi, Chômage et Taux de chômage selon le recensement des Régions métropolitaines (Moyennes mobiles de trois mois): Ontario
10. Population active, Emploi, Chômage et Taux de chômage selon la Province

Source: Statistique Canada, La population active, mensuel.

Note: Toutes les estimations données dans ces tableaux, sauf indication contraire, sont des estimations réelles. Elles ne sont pas désaisonnalisées. Les totaux peuvent ne pas être exacts en raison de l'arrondissement.

**Note:** The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

**Remarque:** L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

# Labour Market Report

## Rapport sur le marché du travail

December 2000 / Décembre 2000

## LABOUR MARKET REPORT / RAPPORT SUR LE MARCHÉ DU TRAVAIL

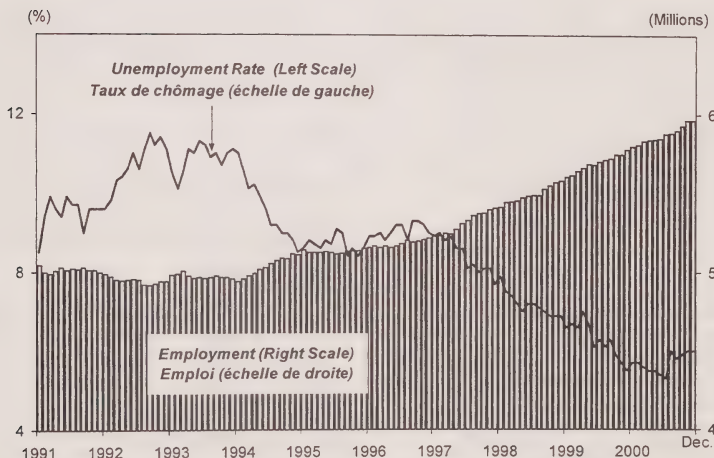

### DECEMBER HIGHLIGHTS:

- After rising for seven consecutive months, the **seasonally-adjusted** employment in Ontario edged down by 1,000 in December 2000. At the same time, the number of persons in the labour force went up marginally (+2,000).
- Ontario's **seasonally-adjusted** unemployment rate remained unchanged at 6 percent in December 2000 (see Chart 1).

### FAITS SAILLANTS EN DÉCEMBRE:

- Après avoir connu une hausse pendant sept mois consécutifs, le nombre d'emplois **désaisonnalisés** en Ontario a diminué de 1 000 en décembre 2000. Parallèlement, le nombre de personnes faisant partie de la population active a très légèrement augmenté (+2 000).
- Le taux de chômage **désaisonnalisé** de l'Ontario est resté inchangé à 6 % en décembre 2000 (voir le graphique 1).

## COMPARED TO A YEAR AGO: (Unadjusted Estimates)

- During the period December 1999 to December 2000, Ontario led the nation in employment growth with an increase of 188,000 jobs on an unadjusted basis. There was also a strong increase in labour force participation of 230,000 in the province. Consequently, the unadjusted unemployment rate rose by 0.5 percentage points to 5.4 percent in December 2000.

- Between December 1999 and December 2000, employment increased by 59,000 for male workers. However, this gain in employment was surpassed by a larger rise in the labour force of 77,000 which pushed the number of unemployed males up by 19,000. For female workers, similar pattern was recorded. Job growth of 129,000 was offset partially by a higher participation in the labour force of 152,000. As a result, unemployment among females went up by 23,000 (see Chart 2).

- More than three-quarters of total job gains occurred in the full-time category. Full-time job growth was shared by all age groups with older workers experiencing the largest increase (+76,000). In the part-time category, workers 25 to 44 years old lost 15,000 jobs over the year while the other age groups recorded moderate increases (see Chart 3).

- Across industries, the largest growth in absolute numbers occurred in the manufacturing (+78,000) and information, culture and recreation (+42,000) sectors. These gains were offset by declines in the educational services (-23,000); agriculture (-18,000) and public administration (-13,000) sectors.

## PAR RAPPORT À L'ANNÉE DERNIÈRE : (Estimations non désaisonnalisées)

- De décembre 1999 à décembre 2000, l'Ontario, avec une hausse de 188 000 emplois sur une base non désaisonnalisée, a été le moteur de la croissance au pays. Au cours de cette période, on a également observé dans la province une forte augmentation dans la participation à la population active (+230 000). Par conséquent, le taux de chômage non désaisonnalisé s'est élevé de 0,5 point de pourcentage pour s'établir à 5,4 % en décembre 2000.

- Pendant la même période, le nombre d'emplois a augmenté de 59 000 chez les travailleurs de sexe masculin. Toutefois, étant donné une hausse de 77 000 dans le nombre de personnes faisant partie de la population active, le nombre des chômeurs a enregistré une augmentation de 19 000. On a noté la même tendance chez les travailleuses. La croissance de l'emploi de 129 000 a été partiellement neutralisée par une participation plus élevée à la population active (+152 000). Le chômage chez les femmes s'est en conséquence élevé de 23 000 (voir le graphique 2).

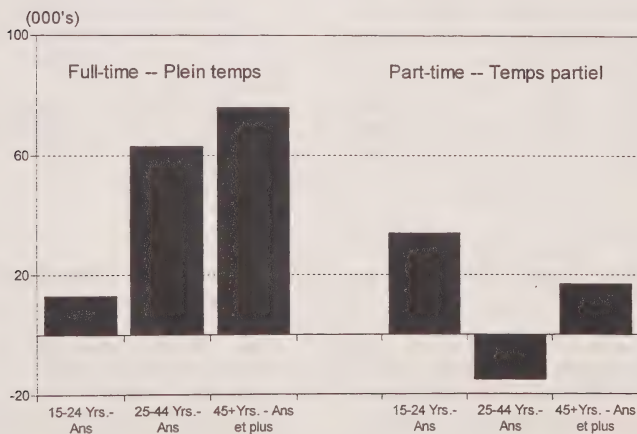

- Plus de trois quarts des gains totaux ont été enregistrés dans la catégorie des postes à plein temps. Tous les groupes d'âge ont tiré profit de cette croissance des emplois à plein temps, les travailleurs plus âgés en ayant été les principaux bénéficiaires (+76 000). Dans la catégorie des postes à temps partiel, on a assisté au cours de l'année à une perte d'emplois de 15 000 chez les travailleurs âgés de 25 à 44 ans alors que dans les autres groupes d'âge, on a noté des hausses modérées (voir le graphique 3).

- Parmi les différents secteurs industriels, on a observé la croissance la plus importante en nombres absolus dans les secteurs de la fabrication (+78 000) ainsi que de l'information, de la culture et des loisirs (+42 000). Ces gains ont toutefois été contrebalancés par des baisses dans les secteurs des services d'enseignement (-23 000), de l'agriculture (-18 000) et des administrations publiques (-13 000).

Note: The Labour Force Survey has undergone major revisions to reflect changes to the production of labour market data. As a result, estimates are revised back to January 1976. All historical comparisons of estimates produced in this report are based on the same revised data.

Remarque: L'Enquête sur la population active a été révisée en profondeur afin de refléter les modifications apportées à la production de données sur le marché du travail. En conséquence, les estimations ont été révisées rétroactivement jusqu'à janvier 1976. Toutes les comparaisons historiques d'estimations faites dans ce rapport s'appuient sur les données révisées.

## Recent Trends

- After a slight decline last month, Ontario's employment grew by 16,000 on a seasonally-adjusted basis in January 2001.
- There were 6,338,000 persons participating in the labour force – 5,000 less than in December 2000.
- This combination of job growth and labour force decline pushed the unemployment rate down by 0.3 percentage points in January 2001. At 5.7 percent, the jobless rate for Ontario was much lower than the Atlantic provinces but slightly higher than the prairie provinces.
- Employment prospects for youth also improved in January 2001 as the jobless rate for the 15-24 years old declined by 1.6 percentage points to 10.9 percent.

## Ontario's Labour Market At A Glance, 2000

Entering the new millenium, Ontario's economy remained strong through the year of 2000.<sup>1</sup> Employment in Ontario continued to grow at a healthy pace on an annual basis. The province created 184,000 net new jobs, bringing the average level to 5,872,100 people working in 2000. Full-time jobs represented 86 percent of this growth. This drew 157,100 more job seekers into the labour market, pushing the labour force up to 6,227,900. Although participation was high, employment growth in 2000 was strong enough to drive the employment rate up and push the unemployment rate down. At 5.7 percent, it's the lowest unemployment rate Ontario recorded in the last decade. This compares to a national rate of 6.8 percent in 2000.

### Estimated Labour Force Status of Ontario's Working Age Population

Source: Statistics Canada, Labour Force Survey.

<sup>1</sup> Estimates for 2000 are preliminary and are subject to change.

Compared to 1999, employment growth in Ontario was faster than population growth. Employment seemed to favour youth (15-24 Years old) and workers 45 year of age and older. Unemployment fell in almost every major age/sex group except for persons 45 years of age and older where increases in labour force outpaced employment growth slightly.

	1999 (000s)	2000 (000s)	Change (000s) (%)	
<b>Population 15+</b>	9,111.1	9,274.4	163.3	1.8
15-24 years old	1,494.5	1,516.4	21.9	1.5

Females	181.0	171.6	-9.4	-5.2

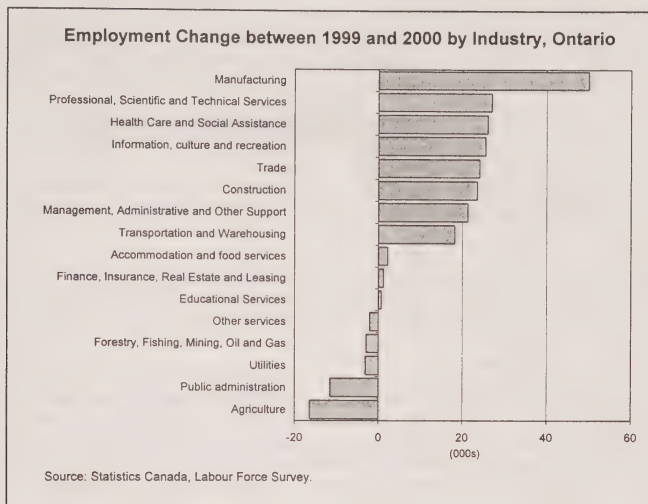

Source: Statistics Canada, Labour Force Survey.

As a result, employment rates rose among all age/sex groups while unemployment rates fell. Although double that of the provincial rate, youth unemployment rate dropped faster than any other age groups in 2000.

	1999 (%)	2000 (%)	Change
<b>Unemployment Rate 15+</b>	6.3	5.7	-0.6

Females	56.5	57.5	1.0

Source: Statistics Canada, Labour Force Survey.

With a 4.8% increase in 2000, employment growth in manufacturing accounted for more than one-quarter of the total job gain. The largest decline was in agriculture followed by the public administration sector.

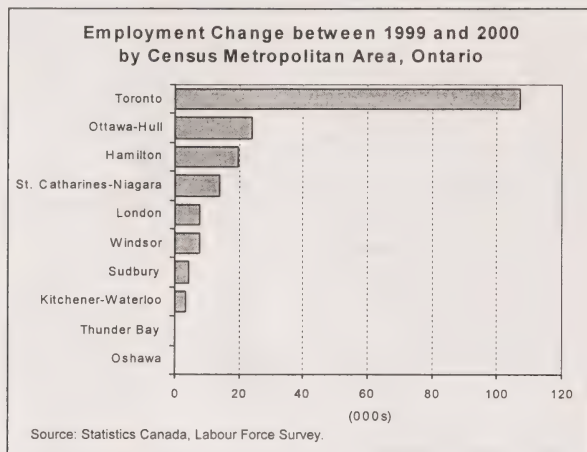

Almost every occupation experienced some employment growth in 2000 except for occupations unique to primary industry. Sales and service occupations took the lead in job creation.

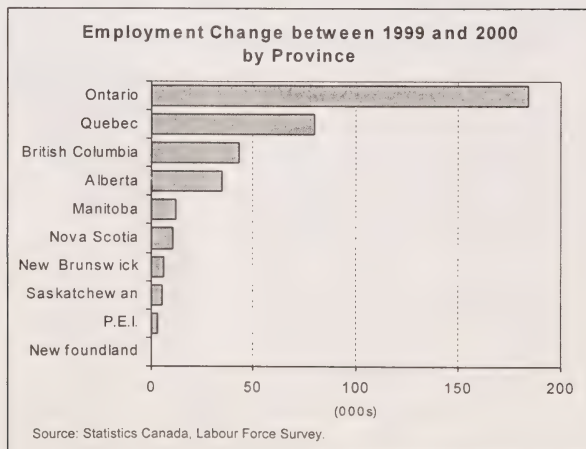

Of the ten census metropolitan areas in Ontario, employment growth was strongest in CMA Toronto in 2000.

Ontario was the biggest gainer in job growth. The province generated almost half of the country's total employment increase between 1999 and 2000.

## Internet Recruiting An Emerging Industry

The Internet has transformed many aspects of business and commerce in recent years, but few studies have examined its impact on labour markets. This report looks at how the Internet is altering the way people look for jobs and the way firms recruit workers. It examines Internet recruiting as an emerging industry in Canada.

### Impact on Traditional Forms of Job Search

Internet recruiting is transforming more conventional methods used to match job seekers with job openings, i.e. traditional placement support programs, government labour exchange services, job banks, newspaper ads, etc.

- The *Labour Force Survey* (Statistics Canada) data identified a Canada-wide decrease in the use of public employment agencies as a job search method since 1976. Subsequently, during the 1990s, governments converted their traditional job banks from paper listings into computerized postings which are now connected to the Internet.
- The *Labour Force Survey* data showed that in 1999 more than half (53%) of unemployed persons looked at job ads when looking for work. During the recent economic expansion, large newspapers entered the recruiting market by converting their traditional newspaper ads into Internet job banks that can even pre-screen candidates. Although there are costs involved for employers to use these private-sector job banks, the pre-screening tools, information resources, and other value-added features, contribute to their popularity. The services are free for job seekers.

### Growth of a New Industry

In only five years, Internet recruiting has emerged as an industry that is likely to expand in the future and change the way people and jobs are matched.

- More than 2,000 Internet job search sites exist in the United States and many are entering the Canadian market. A decade ago, virtually no sites existed anywhere.
- The Toronto Star and Globe and Mail launched [Workopolis.com](http://Workopolis.com) to combine their career listings, including those with affiliates in surrounding communities. With 15,000 job listings, and 160,000 résumés, this site is recognized as one of the largest in Canada. Future mergers and anticipated convergence between newspapers and other communications media (e.g. television and the Internet) will add a further dimension. More specialization among smaller Internet recruiting sites has been forecast as a result, i.e. sites that focus only on specific sectors.
- With the growth of self-employment, sites have emerged for entrepreneurs and freelance agents, matching them with contracts or projects around the world, e.g. [Guru](http://Guru) and [eWork Exchange](http://eWorkExchange). Canada's [Bellzinc](http://Bellzinc) has developed a business-to-business E-tendering site.
- More companies are also using the Internet as a cost-effective and far-reaching method for advertising internal vacancies. According to the Globe and Mail,<sup>1</sup> Forrester Research predicted that, by 2002, all large companies, 60% of medium-sized firms, and 20% of small companies will include the Internet as one of their methods for recruiting, (either developing their own systems, or using the services of providers, such as Workopolis and others).

## Household Internet Use Increasing and Diversifying

Statistics Canada has explored the growing use of the Internet in this country since 1997. Below are highlights from the *Household Internet Use Survey 1999*, which illustrates recent trends for households across Canada.<sup>2</sup>

- The report found that 42% of Canadian households use the Internet regularly, up from 36% in 1998, and 29% in 1997. Internet use in Ontario (46%) is above the national average, with only British Columbia and Alberta experiencing higher rates.
- The driving force behind Internet use is the increase in proportion of households using the Internet from home. The home-use rate increased substantially in two years, from 16% in 1997 to almost 29% in 1999.
- Internet use at work, school, public libraries, or other locations increased, but not to the same extent. Only 22% of all Canadian households have a member who uses the Internet at work, 15% at school, 5% in libraries, and 4% in other locations.
- The household study did not examine Internet use for job search purposes. However, it found that 44% of households who accessed the Internet at home, used it to obtain government information (a significant increase from 36% the previous year).
- In addition, 85% of home-use households used the Internet to research specific information (up sharply from 68%).
- Household use of the Internet for formal education/training changed modestly, from 30% in 1998 to 32% in 1999.
- Of the households with someone who used the Internet from home, one in five (19.2%) used the Internet for self-employment purposes in 1999. One in four households (23.9%) did so for employer-related reasons.

For more information on this subject, please refer to the article which was featured in the January 2001 edition of the *Economic Observer*, *Plugging in: The increase of Household Internet Use Continues*, by P. Dickinson and J. Ellison, or refer to the *Statistics Canada Daily*, December 4, 2000, [www.statcan.ca/Daily/English/001204/d001204a.htm](http://www.statcan.ca/Daily/English/001204/d001204a.htm).

In March 2001, Statistics Canada plans to release a *General Social Survey*, which will explore the growing use of the Internet by *individuals*. Thus in a future edition, we may examine in greater detail the demographic characteristics identified regarding *individual* Internet users, including age, education, and use for job search.

<sup>2</sup> Technical note: *Household* surveys are not *individual* surveys. Each *household* (not each *individual*) represents one unit of analysis, regardless of size, type, number of maintainers, or in this case, numbers of Internet users. At least one member of the household had to be an Internet user, for that household to be included in the statistics. Where any member of a household used the Internet in more than one location (e.g. at home and at work), that household was included in the penetration rates for both locations. Household characteristics, such as income group, education, etc. are based on the characteristics of the maintainer, or head.

# Labour Market Report

March 2001, Volume 1, Issue 2

## **February 2001 Data:** (based on seasonally-adjusted data only)

### **In this Issue:**

☐ February 2001 data

☐ Ontario's Labour  
Market at a Glance:  
Participation Rates

☐ Where are the jobs  
of the future ?

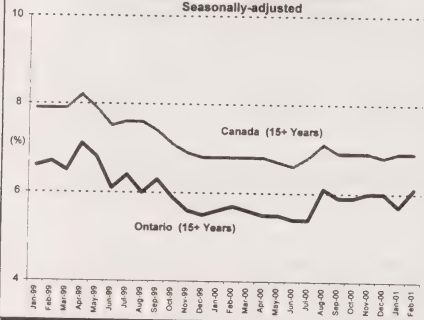

- In February 2001, after four years of employment growth, Ontario recorded a monthly job loss of 38,000 on a seasonally-adjusted basis.
- The number of persons participating in the labour force fell by 16,000 to 6,322,000 in February 2001.
- Ontario's unemployment rate rose from January's 5.7 percent to 6.1 percent in February 2001.
- The jobless rate also increased for Newfoundland, New Brunswick and Saskatchewan.
- The national unemployment rate remained unchanged at 6.9 percent.
- Young people in Ontario lost 20,000 jobs in February 2001.
- The jobless rate for Ontario's youth increased from 10.9 percent in January to 12.9 percent in February 2001.

## Ontario's Labour Market At A Glance: Participation Rates

Year 2000 marked the fourth year of steady labour force participation growth in Ontario. Over the past 25 years, there were changes in the patterns of participation in Ontario's labour market.

In 1976, only 64.3 percent of the working-age (15+ years) population participated in the labour force. This rate went up gradually to a peak of 69.9 percent in 1989.

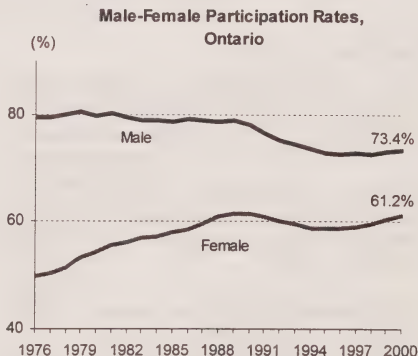

During the recessionary years in the early 1990's, the rate dropped significantly. It bottomed at 65.6 percent in 1995 and 1996 before it started to recover slowly.

By the year 2000, 67.2 percent of the population 15 years and older participated in Ontario's labour force.

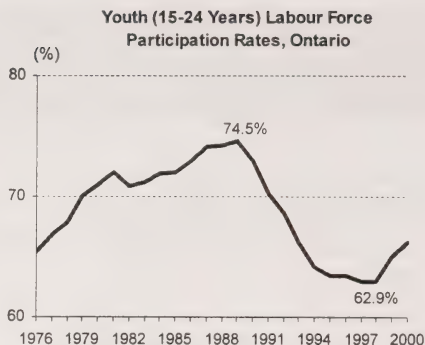

### Participation rates up for both men and women, but more so for women.....

- Women's participation rates have increased markedly during periods of economic expansion and slowed down considerably during recessions. However, they recovered quickly since 1995. At 61.2 percent in 2000, women's participation almost reached the peak of 61.4 percent recorded in 1990.
- The participation rate for men started to recover in the last couple of years and remains significantly below their peak of 80.4 percent reached in 1979.
- As more females entered the labour market, the gap between male and female labour force participation has narrowed.

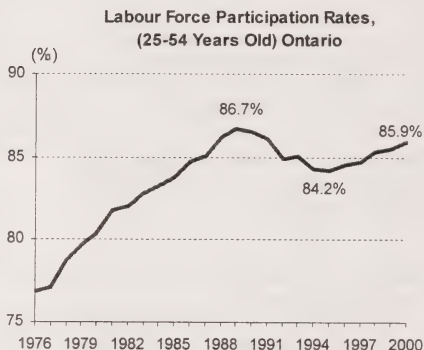

## Young Workers

- The participation rate for youth 15 to 24 years old declined substantially in the early 1990s. It dropped significantly during the recessionary years – from 74.5 percent in 1989 to 62.9 percent in 1998. By 1999, participation rates among youths in Ontario began to pick up and had reached 66.1 percent in 2000.

## Prime Age Workers

- After fallen moderately during the recessionary years, the participation rate for workers 25-54 years old began to increase in 1996.
- By the year 2000, 85.9 percent of the 25-54 years old population participated in Ontario's labour market, close to their all-time high of 86.7 percent in 1989.

## Older Workers

- Since 1986, there has been a steady decline in participation among workers 55+ years old.
- In 2000, only 26.8 percent of the 55+ years old population participated in the labour force compared to 33.9 percent in 1976.
- The downward trend in older workers' participation rate is primarily due to an increasing tendency towards early retirement, particularly in the last decade.

# Ontario Labour Market Feature Report: Where are the Jobs of the Future?

Occupational forecasts are based on the best judgements that specialists can achieve in a complex and rapidly changing labour market. Any number of factors, however, can influence the growth or decline of an occupation and its skills requirements.

The Ministry of Training, Colleges and Universities and Human Resources Development Canada Ontario Region developed and released the publication *Ontario Job Futures 2000* to provide insight into future employment prospects. This work contains an analysis of industrial and occupational trends in Ontario, and profiles for 157 occupations. Each profile contains an estimate of how many people were working in the occupation in Ontario in 2000 and an evaluation of the employment prospects through to 2005.<sup>1</sup> For more information visit <http://ontariojobfutures.net>

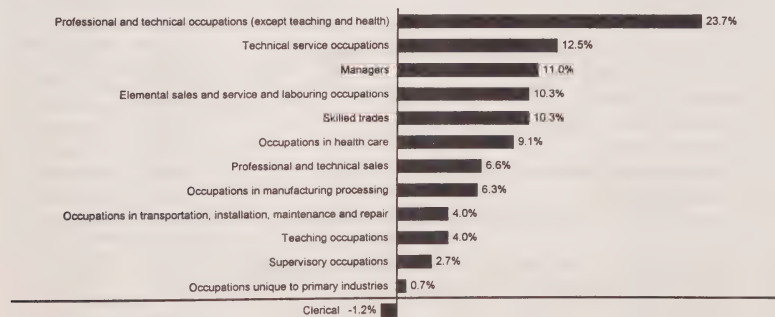

## Drivers of Job Creation

Employment opportunities essentially come from two sources. Hiring can be due to *replacement* demand (created by workers leaving) or *expansion* demand (created by net new job creation).

- As illustrated in Figure 1, almost one quarter of the *new* jobs through to 2005 are expected to come from growth in business related **professional and technical fields**, such as accounting, engineering, information technology, and consulting.
- Technical and skilled sales and service occupations** together will likely contribute around 19% of new jobs.
- Approximately 11% of new job creation will involve growth in **management** occupations.
- The **skilled trades** (especially construction and manufacturing) are expected to contribute approximately 10% of new jobs. Retirements will likely add to *replacement* demand.

## Estimated Contributions to New Job Growth, 2000 to 2005 Major Occupation Groups, (by Share of New Job Growth)

Figure 1

<sup>1</sup> *Employment Prospects Definitions:*

Strong – Employment is expected to increase much faster than the average for all occupations through the year 2005.

Good – Employment is expected to grow about as fast as the average for all occupations through the year 2005.

Fair – Employment is expected to increase more slowly than the average for all occupations through 2005.

Limited – Employment is expected to decline through the year 2005.

- **Clerical occupations** are expected to lose ground through to 2005. Their large numbers will still result in many job opportunities from turnover, but the decline suggests that some clerical workers will not be replaced. Furthermore, technology and the higher skills demanded by companies today contribute to the decline of "traditional" clerical occupations and to the growth, or evolution of professionals in business.

## Largest Occupations, Based on Overall Employment in 2000

Many jobs with a large employment base, even a declining one, can have a sizeable number of job openings due to replacement needs. Table 1 lists the ten occupations with highest individual labour force in *Ontario Job Futures 2000*.

Table 1

NOC	NOC Title	Employment In 2000	Prospects to 2005
6421	Retail Salespersons and Sales Clerks	223,500	Good
0621	Retail Trade Managers	135,000	Good
7411	Truck Drivers	93,900	Good
<b>2162</b>	<b>Computer Systems Analysts</b>	<b>91,200</b>	<b>Strong</b>
1111	Financial Auditors and Accountants	78,200	Good
4142	Elementary School and Kindergarten Teachers	73,700	Good
1411	General Office Clerks	72,000	Fair
<b>3152</b>	<b>Registered Nurses</b>	<b>70,800</b>	<b>Strong</b>
1221	Administrative Officers	70,700	Good
1241	Secretaries (Except Legal and Medical)	69,400	Fair

## Occupations With Strong\* Employment Prospects (Regardless of Size)

Below is a list all of the occupations in which employment prospects are expected to be strong\*.

Table 2

NOC	NOC Title	Employment In 2000	Prospects to 2005
2162	Computer Systems Analysts	91,200	Strong
3152	Registered Nurses	70,800	Strong
2242	Electronic Service Technicians (Household and Business Equipment)	36,400	Strong
7231	Machinists and Machining and Tooling Inspectors	20,800	Strong
2132	Mechanical Engineers	17,700	Strong
0213	Information Systems and Data Processing Managers	17,000	Strong
7232	Tool and Die Makers	16,300	Strong
2133	Electrical and Electronics Engineers	15,000	Strong
2147	Computer Engineers	12,900	Strong
2241	Electrical and Electronics Engineering Technologists and Technicians	12,600	Strong
6241	Chefs	12,600	Strong
2233	Industrial Engineering and Manufacturing Technologists and Technicians	8,600	Strong
2232	Mechanical Engineering Technologists and Technicians	3,500	Strong
2134	Chemical Engineers	2,700	Strong

\* Strong is defined as above average employment growth expected.

## Employment Prospects by Occupational Category Through to 2005

Table 3 (Appendix) provides a summary of prospects for all occupations in *Ontario Job Futures*.

Table 3

NOC	NOC Title	Employment In 2000	Prospects To 2005
<b><u>Management Occupations</u></b>			
0621	Retail Trade Managers	135,000	Good

# Labour Market Report

Volume 1, Issue 3

## In this Issue:

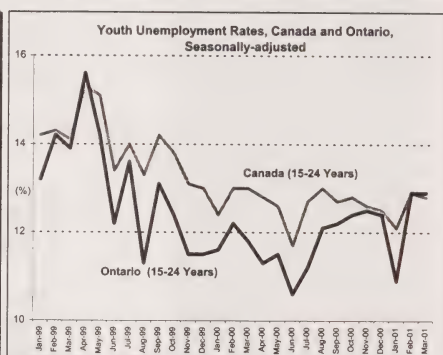

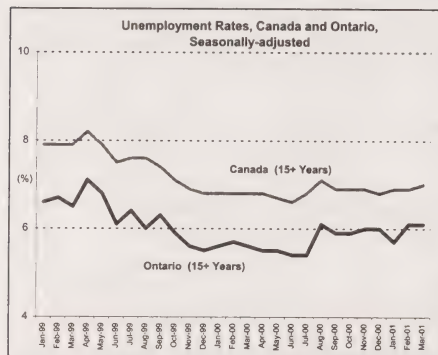

- ☐ March 2001 data
- ☐ Ontario's Labour Market at a Glance: Changes in Occupational Employment in Larger Ontario Cities, 1990-2000
- ☐ Adult Education and Training in Ontario

### March 2001 Data: (based on seasonally-adjusted data only)

- In March 2001, after a decline of 38,000 last month, employment in Ontario rose by 16,000 on a seasonally-adjusted basis.
- The number of persons participating in the labour force rose by 22,000 in March 2001.
- Ontario's unemployment rate remained unchanged at 6.1 percent this month.
- The jobless rate increased across almost all provinces except for Prince Edward Island, Saskatchewan and British Columbia.
- The national unemployment rate edged up to 7.0 percent in March 2001.
- Both labour force and employment among young people in Ontario increased by 1,000 in March 2001.
- The jobless rate for Ontario's youth remained unchanged at 12.9 percent this month.

## Ontario's Labour Market At A Glance: Changes In Occupational Employment In Larger Ontario Cities, 1990-2000

Information on occupational employment in Ontario's major cities can be useful in certain labour market related activities such as job seeking and planning training programs.

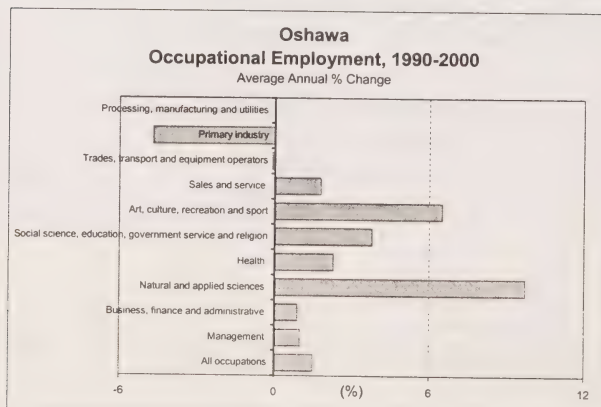

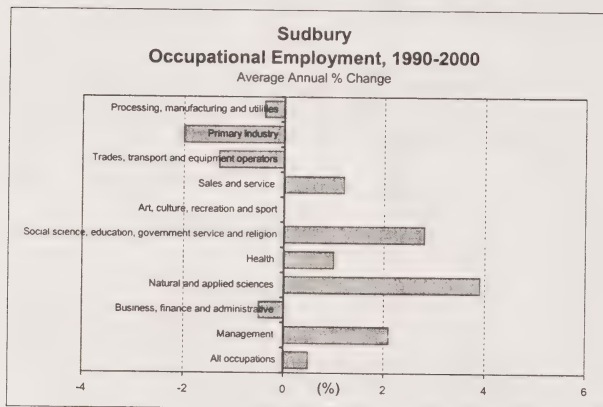

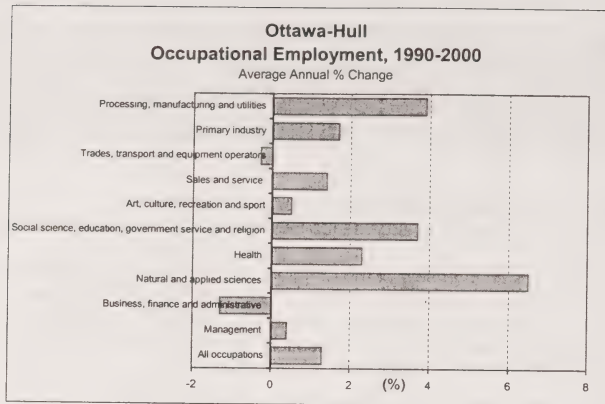

This report provides an overview of the employment changes<sup>1</sup> in occupational groups for larger Ontario cities over the ten years from 1990 to 2000. The changes in these occupational groups were calculated based on the employment data for occupations by census metropolitan area (CMA) from Statistics Canada's Labour Force Survey (LFS). A CMA has an urban core population of at least 100,000.

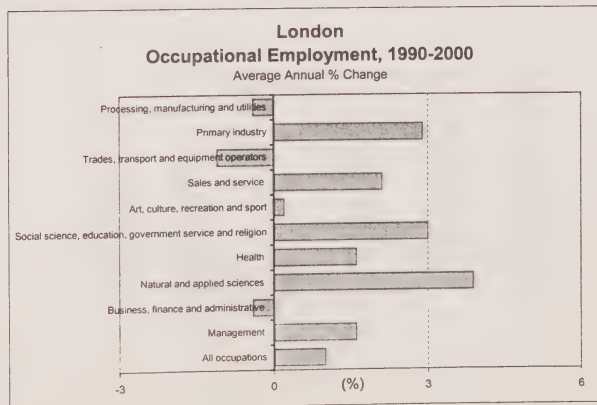

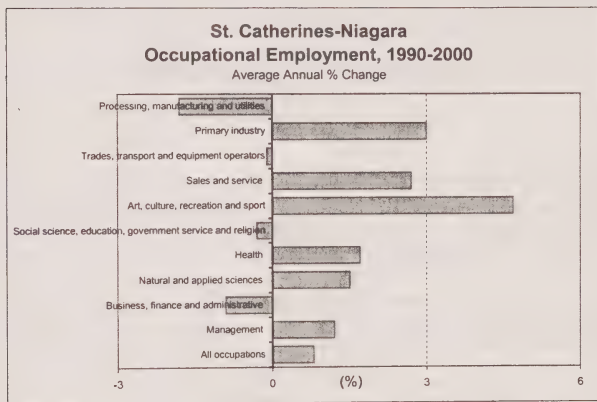

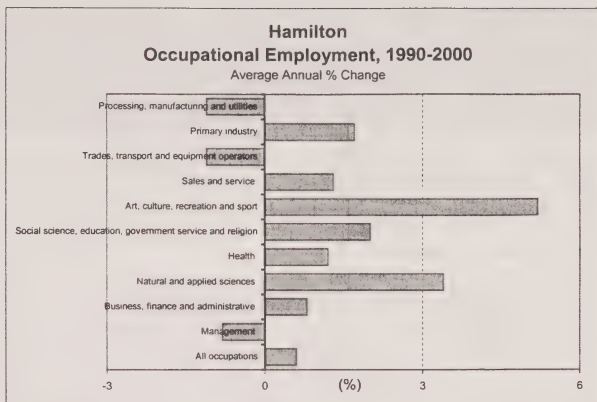

In general, the Toronto area was the only CMA that showed employment growth in all occupational groups for the last decade.

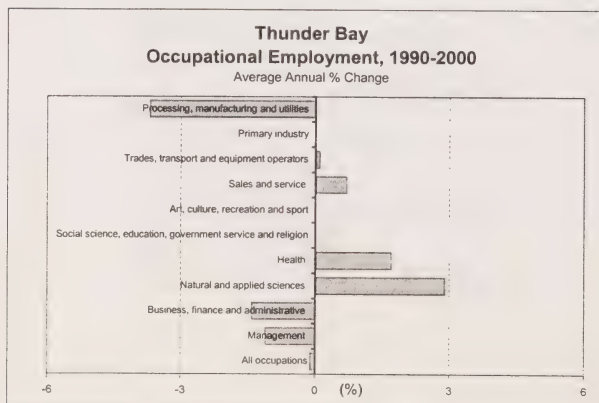

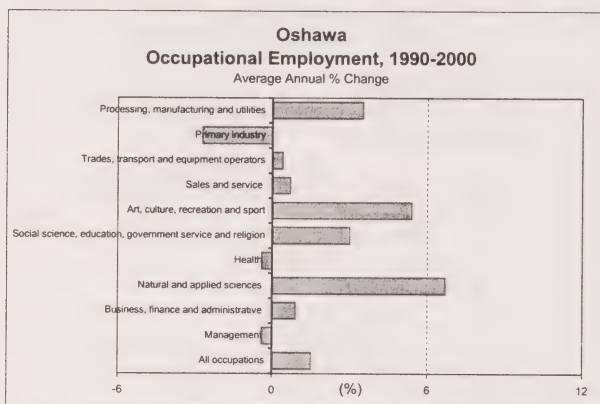

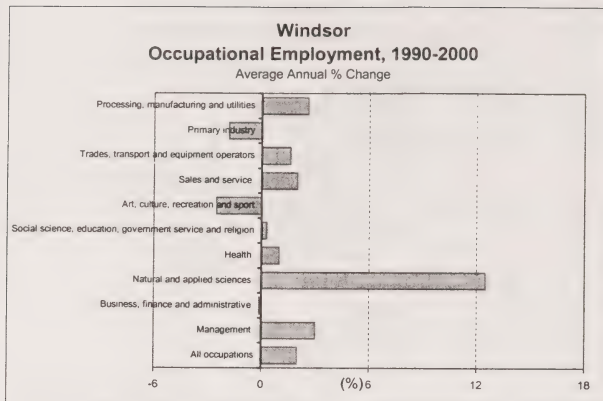

Natural and applied science occupations (e.g. engineers, architects, computer programmers, systems analysts, technologists and technicians) experienced the strongest growth in most CMAs. This occupational group grew more than 5% on an average annual basis in Windsor, Oshawa, Ottawa, Toronto and Kitchener.

<sup>1</sup> Employment change in occupation in this report is defined as average annual percentage change on a compound basis over the 10 years, 1990 to 2000.

# Ontario Labour Market Feature Report:

## Adult Education and Training in Ontario

Interest in adult education and training is growing throughout the industrialized world as employers, governments and working people come to recognize the important role learning plays in wealth creation and the ability to deal with the new opportunities and demands of modern economies.

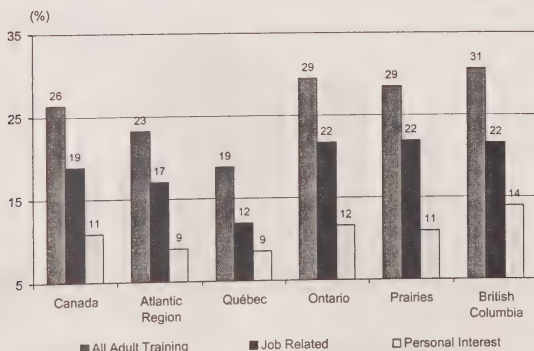

The Adult Education and Training Survey (AETS), conducted by Statistics Canada, is the primary vehicle for capturing and measuring individual participation in adult learning in Canada. The survey covers all forms of organized learning activities – programs and courses, job-related and personal interest, full-time and part-time, employer sponsored and non-employer sponsored – by adults age 17 and over who have already completed their initial education (i.e. those in school full-time are excluded, unless their education is employer-sponsored). Training in all locations including university and college, private and commercial institutions, on-site at the workplace and over the Internet are covered.

The following describes the learning experiences of Ontarians in 1997 as captured in the 1998 AETS.

### Cross-Canada Comparison

- About 29 percent of adults in Ontario had some learning experience in 1997. More Ontario adults participated in education and training than did Canadians as a whole. In general, Ontario and the Prairie Provinces and British Columbia had higher participation rates than did the Atlantic Region or Quebec.
- This same pattern prevailed when considering job-related education and training programs and personal interest courses separately. In Ontario, about 22 percent of adults participated in job-related education and training while another 12 percent of adults took personal interest programs and courses.

**Participation Rates of Adults in Training, Canada**

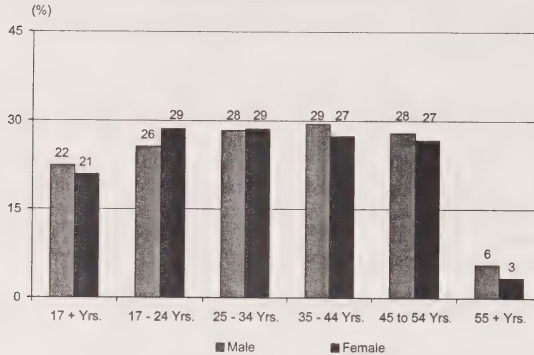

Source: Statistics Canada, Adult Education and Training Survey, 1998.

## Job-Related Education and Training in Ontario

- Men and women across all age groups participated in job-related education and training about equally. However, participation drops off noticeably among adults 55 years of age and over.

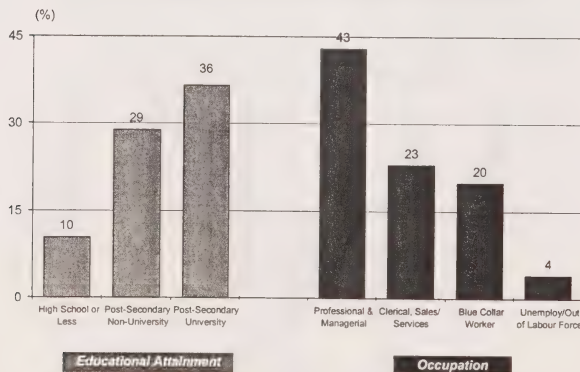

**Participation Rates of Adults in Job-Related Training  
By Age and Sex, Ontario**

Source: Statistics Canada, Adult Education and Training Survey, 1998.

- Participation in job-related education and training increases with the level of education from 10 percent for those with high school education or less to 36 percent for those with post-secondary university education.
- By broad occupational grouping, not surprisingly, professional and managerial employees have the highest rate of training.

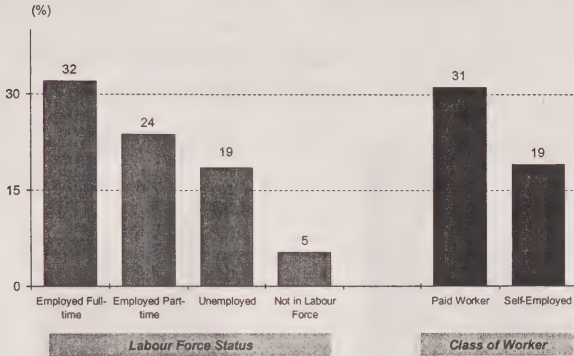

**Participation Rates of Adults in Job-Related Training  
By Educational Attainment and Occupation, Ontario**

Source: Statistics Canada, Adult Education and Training Survey, 1998.

- Furthermore, those employed full-time had the highest participation rates while those not in the labour force had the lowest. As well, participation was higher among adults who were paid employees compared to those who were self-employed.

**Participation Rates of Adults in Job-Related Training  
By Labour Force Status and Class of Workers, Ontario**

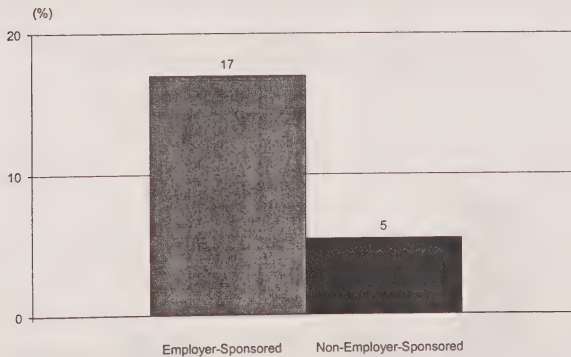

Source: Statistics Canada, Adult Education and Training Survey, 1998.

### Employer-Sponsored Job-Related Education and Training

- Seventeen percent of adults took job-related education and training that was sponsored by employers while 5 percent took such training that was not sponsored by employers.

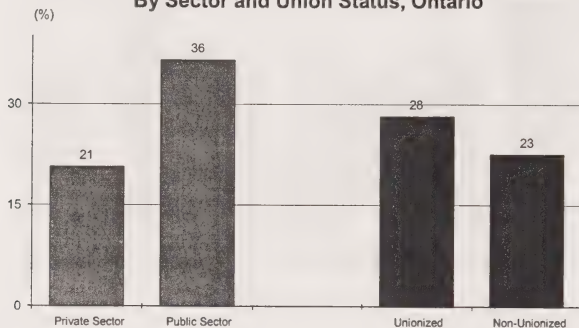

**Participation Rates of Adults in Job-Related Training  
By Type of Funding, Ontario**

Source: Statistics Canada, Adult Education and Training Survey, 1998.

- Twenty-one percent of private sector employees compared to 36 percent of public sector employees participated in employer-sponsored job-related education and training.
- Twenty-eight percent of adults who took employer-sponsored job-related training were covered by collective bargaining while 23 percent had no collective bargaining provisions.

**Participation Rates of Adults in Job-Related Training  
By Sector and Union Status, Ontario**

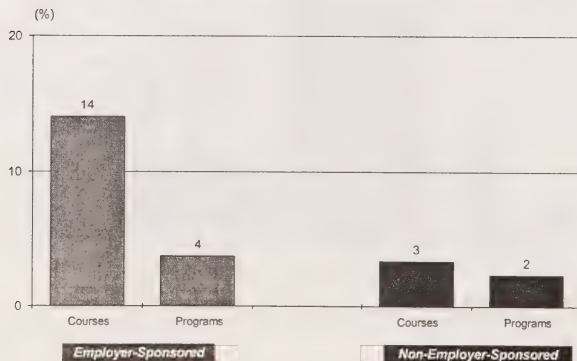

Source: Statistics Canada, Adult Education and Training Survey, 1998.

### Types of Learning Experience

- Regardless of funding source, a larger proportion of adults participated in short training courses than in programs leading to diplomas, certification or degrees.
- Among those receiving employer support, 14 percent participated in courses while among the self-supporting individuals, 3 percent did so.

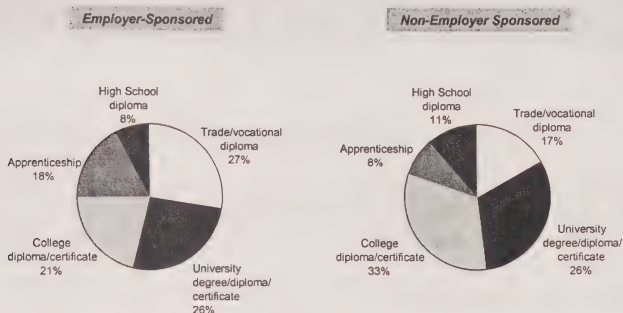

**Participation Rates of Adults in Job-Related Training  
By Types of Learning Experience, Ontario**

Source: Statistics Canada, Adult Education and Training Survey, 1998.

- Courses are usually of shorter duration and participation in such may be more directly related to current employment needs. Participation in programs leading to accreditation, on the other hand, is more likely to be related to future career needs.
- Participants in programs not supported by an employer were more likely to be in college diploma/certificate (33 percent) or university degree/diploma/certificate (26 percent) programs than individuals whose participation was supported by employers.

### Participation in Programs Leading to Accreditation, Ontario

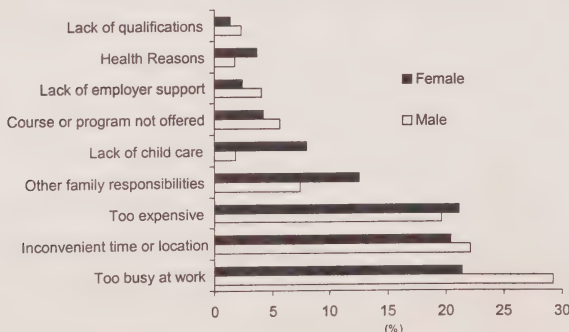

Source: Statistics Canada, Adult Education and Training Survey, 1998.

### Training Barriers

- While, in general, the major reasons for not taking more training include being too busy at work, courses and programs offered at inconvenient time or location, or being too expensive, there are noticeable differences based on gender. While more men than women are too busy at work, more women cannot participate in training because of lack of child care or other family responsibilities.

### Reasons for Not Taking More Training, Ontario

# Labour Market Report:

Volume 1, Issue 4

**April 2001 Data:** (based on seasonally-adjusted data only)

- In April 2001, employment in Ontario rose by 24,000 on a seasonally-adjusted basis. The job gain in April and March totalled 39,000 and offset February's employment loss of 38,000 in the province.
- The labour force in Ontario went up by 12,000 to 6,355,000 in April 2001.
- Ontario's unemployment rate fell by 0.2 percentage points to 5.9 percent.
- The unemployment rate increased in the province of Newfoundland, Prince Edward Island and Saskatchewan. The rest of the provinces experienced no change or slight decreases in their jobless rate.
- The national unemployment rate was unchanged at 7 percent in April 2001.
- Labour force and employment among young people in Ontario increased by 8,000 and 11,000 respectively.
- The jobless rate for Ontario's youth went down to 12.6 percent from last month's 12.9 percent.

Notes: Monthly data for CMA and Economic Regions are three-month moving averages.

Census Metropolitan Areas are large cities with an urban core population of at least 100,000 based on the previous census.

Economic Regions are geographical units generally composed of several census divisions.

# Labour Market Report:

Volume 1, Issue 5

**May 2001 Data:** (based on seasonally-adjusted data only)

- Ontario's job creation trend continued in May 2001, with employment up by 7,000. The labour force increased by 6,000.
- The jobless rate for the province remained unchanged at 5.9 percent.
- The Canadian unemployment rate was unchanged at 7 percent for the third consecutive month.
- Major declines in the unemployment rate were recorded in the province of Newfoundland (-1.7%) and Prince Edward Island (-1.4%). The rest of the provinces experienced no change or slight increases in their jobless rate.
- The unemployment rate for Ontario's youth went down from last month's 12.6 percent to 10.9 percent this month.
- The jobless rate for adults (25 + years) in Ontario increased from 4.6 percent in April to 5 percent in May 2001.

Notes: Monthly data for CMA and Economic Regions are three-month moving averages.

Census Metropolitan Areas are large cities with an urban core population of at least 100,000 based on the previous census.

Economic Regions are geographical units generally composed of several census divisions.

## Labour Market Report:

Volume 1, Issue 6

**June 2001 Data:** (based on seasonally-adjusted data only)

- Employment in Ontario, after rising for the last three months, decreased by 8,000 in June 2001. Across provinces, major employment loss was recorded in British Columbia (-17,000). The rest of the provinces experienced moderate changes in their employment levels.
- Ontario's jobless rate edged up by 0.1 percentage point to 6 percent.
- The Canadian unemployment rate held at 7 percent for the fourth consecutive month.
- Prince Edward Island was the only province that recorded a significant decline in its unemployment rate of 2 percentage points.
- The unemployment rate for Ontario's youth went up from 10.9 percent in May to 11.7 percent in June 2001.
- The jobless rate for adults (25 + years) in Ontario edged down to 4.9 percent.

# Labour Market Report:

Volume 1, Issue 7

**July 2001 Data:** (based on seasonally-adjusted data only)

- Moderate changes in employment were recorded in July 2001. Across provinces, job losses were found in Newfoundland (-6,000), New Brunswick, (-3,000), Ontario (-7,000), Alberta (-6,000) and British Columbia (-2,000). Provinces experiencing job gains were Nova Scotia (+5,000), Quebec (+2,000) and Saskatchewan (+3,000).
- The employment loss in Ontario combined with a rise of 18,000 in the labour force pushed the provincial unemployment rate up by 0.3 percentage points to 6.3 percent.
- The Canadian unemployment rate held at 7 percent for the fifth consecutive month.
- The unemployment rate for Ontario's youth went up from 11.7 percent in June to 12.2 percent in July 2001.
- The jobless rate for adults (25 + years) in Ontario rose from 4.9 percent to 5.2 percent.

## Labour Market Report:

Volume 1, Issue 8

**August 2001 Data:** (based on seasonally-adjusted data only)

- In August 2001, employment edged down by 2,000 in Ontario. Job loss in British Columbia was more significant (-20,000). The only province that experienced substantial employment gain was Quebec (+10,000). Employment changed little in other provinces.
- The labour force in Ontario went up by 15,000 to 6,388,000 in August 2001.
- The increase in the number of job seekers combined with the minor employment loss in Ontario pushed the unemployment rate up from 6.3 percent in July to 6.6 percent in August.
- The Canadian unemployment rate also edged up – from 7 percent to 7.2 percent.
- The unemployment rate for Ontario's youth increased by 0.6 percent points to 12.8 percent in August 2001.
- The jobless rate for adults (25 + years) in Ontario rose from 5.2 percent to 5.4 percent.

Note: Figures are rounded to the closest thousands and may not sum to total due to rounding.

Notes: Monthly data for CMA and Economic Regions are three-month moving averages.

Census Metropolitan Areas are large cities with an urban core population of at least 100,000 based on the previous census.

Economic Regions are geographical units generally composed of several census divisions.

# Labour Market Report:

Volume 1, Issue 9

**September 2001 Data:** (based on seasonally-adjusted data only)

The incidents that took place in United States on September 11<sup>th</sup> occurred during the reference week (September 9 to 15) of the Labour Force Survey. The Labour Force Survey considers people who worked at any time during the reference week to be employed, even if they were laid off at some point during the week. During the week of the 11<sup>th</sup>, those who worked early in the week but were told not to go to work following the incidents would all be considered employed. As a result, the September estimates do not reflect the impact of the incidents.

- In September 2001, employment at the national level increased by 20,000. Across provinces, job losses occurred in Ontario (-9,000) and Saskatchewan (-8,000). Quebec was the only province that experienced substantial employment gain of 24,000. Other provinces recorded relatively minor changes in jobs.
- The jobless rates for both Ontario and Canada remained unchanged this month. They stood at 6.6 and 7.2 percent respectively.
- All other provinces experienced lower or no change in unemployment rates except for Saskatchewan, New Brunswick and Manitoba.
- The unemployment rate for Ontario's youth went up by 0.6 percent points to 13.4 percent.
- The jobless rate for adults (25 + years) in Ontario edged down to 5.3 percent.

Note: Figures are rounded to the closest thousands and may not sum to total due to rounding.

Notes: Monthly data for CMA and Economic Regions are three-month moving averages.

Census Metropolitan Areas are large cities with an urban core population of at least 100,000 based on the previous census.

Economic Regions are geographical units generally composed of several census divisions.

## Labour Market Report:

Volume 1, Issue 10

**October 2001 Data:** (based on seasonally-adjusted data only)

- In October 2001, employment at the national level edged up by 2,000 while Ontario lost 3,000 jobs. Major job loss of 14,000 was observed in British Columbia. Other provinces recorded relatively minor changes in employment.
- The unemployment rate for Ontario held at 6.6 percent for the third consecutive month.
- Provinces experiencing lower unemployment rates were New Brunswick (from 11.3 percent in September to 10.6 percent in October) and Manitoba (from 5.3 percent to 4.9 percent). The remaining provinces recorded higher jobless rate this month.
- The unemployment rate for Ontario's youth went down by 0.4 percentage points to 13 percent. This was due primarily to the fact that employment loss of 3,000 was surpassed by a larger decline of 7,000 in the youth labour force.
- Little change in labour market condition was recorded among adult workers (25 + years) in Ontario. For this group, employment was unchanged while labour force increased by 3,000. Their jobless rate edged up to 5.4 percent in October 2001.

Note: Figures are rounded to the closest thousands and may not sum to total due to rounding.

Notes: Monthly data for CMA and Economic Regions are three-month moving averages.

Census Metropolitan Areas are large cities with an urban core population of at least 100,000 based on the previous census.

Economic Regions are geographical units generally composed of several census divisions.

# Labour Market Report:

Volume 1, Issue 11

**November 2001 Data:** (based on seasonally-adjusted data only)

- Employment in November 2001 increased by 14,000 at the national level. Ontario contributed almost all of this growth in jobs (+14,000). Offsetting the employment growth were job losses found in Newfoundland (-2,000), New Brunswick (-1,000), Quebec (-4,000) and Saskatchewan (-1,000). Other provinces recorded little change in employment.
- However, the employment growth in Ontario was surpassed by a larger increase in the number of persons participating in the labour force, pushing the unemployment rate up by 0.2 percentage points to 6.8 percent.
- The Canadian unemployment rate also went up by 0.2 percentage points to 7.5 percent. Most provinces experienced higher unemployment rates. The exceptions were Nova Scotia and Prince Edward Island, where unemployment rates fell by 0.5 percentage points and 0.1 percentage point respectively. For Manitoba, unemployment rate remained unchanged at 4.9 percent in November 2001.
- Almost all of the job growth in Ontario was concentrated among youth 15 to 24 years old (+12,000). However, youth labour force participation also rose, resulting in a higher unemployment rate among youth in Ontario – from 13 percent in October 2001 to 13.9 percent in November 2001.
- The jobless rate for adult workers (25+ years) in Ontario edged up to 5.4 percent in November 2001 as little change in labour market conditions was recorded for this age group.

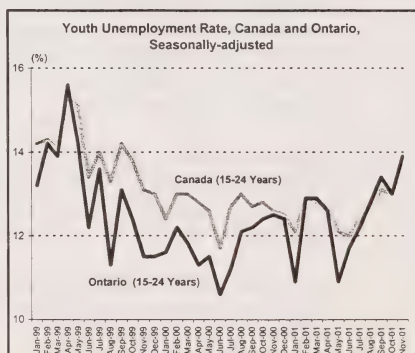

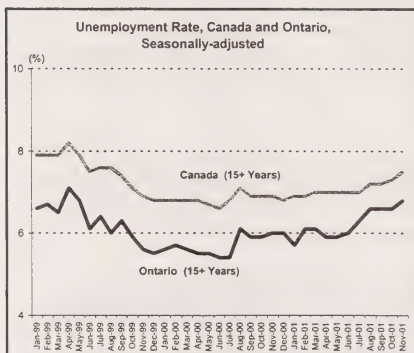

Note: Figures are rounded to the closest thousands and may not sum to total due to rounding.

# Labour Market Report:

Volume 1, Issue 12

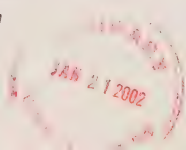

**December 2001 Data:** (based on seasonally-adjusted data only)

- Moderate employment changes were recorded in December 2001. Ontario gained 1,000 new jobs. At the national level, employment went down by an estimated 18,000. Across provinces, major job losses were found in Quebec (-10,000) and British Columbia (-11,000). The rest of the provinces experienced minor changes in their employment levels.
- Ontario's unemployment rate edged up to 6.9 percent in December 2001 as a result of increases in the labour force (+10,000).
- The Canadian unemployment rate went up by half a percent to 8 percent.
- Most provinces experienced higher unemployment rates. Manitoba was the only province that recorded a lower unemployment rate, from 4.9% in November to 4.7% in December. For New Brunswick, the unemployment rate remained unchanged at 11.4 percent in December 2001.
- The unemployment rate for Ontario's youth went down by 0.3 percentage points to 13.6 percent.
- The jobless rate for adults (25+ years) in Ontario increased by 0.2 percentage points as workers in this age group lost 6,000 jobs.

Note: Figures are rounded to the closest thousands and may not sum to total due to rounding.
